6. OPERATING AND ADJUSTMENTS

Once your monitors are securely mounted, you can adjust their position for optimal viewing comfort.

- **Tilt Adjustment:** The VESA plates allow for a tilt range of -45° to $+45^{\circ}$. Loosen the tilt adjustment screw on each VESA plate, position the monitor to your desired angle, and then tighten the screw to secure it.
- **Swivel Adjustment:** The adapter allows for a swivel range of -15° to $+15^{\circ}$ for each monitor. Adjust the monitors horizontally as needed and tighten the swivel mechanism.
- **Horizontal Positioning:** The monitors can be slid along the main adapter bar to adjust the gap between them or to align them perfectly. Loosen the screws holding the VESA plates to the bar, slide the monitors, and then re-tighten.

7. MAINTENANCE

Regular maintenance will ensure the longevity and safe operation of your deleyCON Dual Monitor Adapter.

- **Cleaning:** Clean the adapter with a soft, dry cloth. Do not use abrasive cleaners or solvents, as they may damage the finish.
- **Check Fasteners:** Periodically (e.g., every 3-6 months) check all screws and bolts to ensure they remain tight. Over time, vibrations or adjustments can cause fasteners to loosen.
- **Lubrication:** No lubrication is typically required for this product. If any joints become stiff, contact customer support for advice.

8. TROUBLESHOOTING

| Problem | Possible Cause | Solution |
|----------------------------------|--|--|
| Monitors are unstable or sag | Overload; Loose fasteners; Existing arm too weak | Ensure total weight (adapter + 2 monitors) does not exceed 20kg. Tighten all screws. Verify your existing monitor arm's weight capacity. |
| Difficulty adjusting tilt/swivel | Screws too tight; Mechanism stiff | Slightly loosen the adjustment screws. If still stiff, ensure no cables are obstructing movement. |
| Monitors not level | Uneven installation; Uneven monitor weight | Adjust the height of each VESA plate slightly if possible, or re-level the main adapter bar on your existing arm. |
