## SETUP AND INSTALLATION

---

Follow these steps to properly install your surge protector:

1. **Identify a Wall Outlet:** Locate a standard, grounded 3-prong duplex wall outlet where you intend to use the surge protector.
2. **Plug In:** Align the prongs of the surge protector with the wall outlet and firmly push the unit into the outlet until it is securely seated.
3. **Verify Connection:** Ensure the surge protector is flush against the wall and stable.

## OPERATING INSTRUCTIONS

---

### Using AC Outlets

Once the surge protector is plugged into a wall outlet, its AC outlets are ready for use. Plug your electronic devices into any of the 6 available AC outlets. The 3 swivel outlets can be rotated up to 90 degrees to accommodate larger power adapters without blocking adjacent outlets.

### Using USB Charging Ports

Connect your USB-powered devices (e.g., smartphones, tablets) to the two USB charging ports using their respective USB cables. The ports provide a combined output of 2.4A for efficient charging.

### Surge Protection Indicator

The surge protector features an indicator light (if present, typically labeled 'Protected' or 'Ground') that illuminates when the surge protection is active and the unit is properly grounded. If this light is off, the surge protection may have been compromised, and the unit should be replaced.

## CARE AND MAINTENANCE

---

- **Cleaning:** Unplug the surge protector from the wall outlet before cleaning. Use a dry, soft cloth to wipe the exterior. Do not use liquid or aerosol cleaners.
- **Storage:** Store the unit in a cool, dry place when not in use.
- **Inspection:** Periodically inspect the unit for any signs of damage, such as frayed cords or cracked casing. Discontinue use if damage is found.

## TROUBLESHOOTING

---

**Problem: No power from AC outlets or USB ports.**

**Solution:**

- Ensure the surge protector is firmly plugged into a working wall outlet.
- Check your home's circuit breaker to ensure it has not tripped.
- Verify that the surge protection indicator light (if present) is illuminated, indicating active protection.

**Problem: Surge protection indicator light is off.**

**Solution:** This indicates that the surge protection components may have absorbed a significant surge and are no longer providing protection. The unit should be replaced to ensure continued protection for your devices.
