Problem	Possible Cause	Solution
Bed feels unstable or wobbly	Loose fasteners; uneven floor; incorrect assembly.	Check and tighten all screws and bolts. Ensure the bed is on a level surface. Review assembly steps.
Creaking noises	Loose connections; friction between wood parts or slats.	Tighten all fasteners. Apply felt pads or a thin layer of wax/silicone spray to contact points between slats and frame if creaking persists.
Slats falling out	Improper installation of slats; excessive weight.	Ensure slats are correctly seated in their supports. Verify weight does not exceed 150 kg.
