3. SETUP AND INSTALLATION

The Netatmo Smart Thermostat is designed for straightforward installation. It can be installed as a replacement for an existing wired thermostat or as a wireless thermostat with the included mobile stand. Before beginning, ensure your heating system is compatible (gas, oil, wood, or heat pump boilers).

3.1 Pre-Installation Checklist

- Ensure you have a stable Wi-Fi connection at the installation location.

- Download the Netatmo Energy app from your smartphone's app store (iOS or Android).
- Turn off the power to your heating system at the main circuit breaker before handling any wiring.
- Identify your current thermostat wiring (if replacing an existing unit).

3.2 Installation Steps (General)

1. **Power Off:** Disconnect power to your heating system.
2. **Install the Relay:** The Relay connects to your boiler. Follow the in-app instructions for specific wiring diagrams based on your boiler type. This step is crucial for the thermostat to communicate with your heating system.
3. **Position the Thermostat:**

5. **Power On:** Restore power to your heating system.
6. **App Configuration:** Open the Netatmo Energy app and follow the on-screen instructions to connect your thermostat to your Wi-Fi network and complete the setup process. This includes creating your heating schedule and calibrating the device.

4. OPERATING INSTRUCTIONS

Once installed and configured, the Netatmo Smart Thermostat offers multiple ways to control your home's temperature.

4.1 Using the Netatmo Energy App

The Netatmo Energy app is the primary interface for managing your thermostat. It allows for:

- **Temperature Adjustment:** Manually set the desired temperature.
- **Scheduling:** Create and modify detailed heating schedules for different times of the day and week. The thermostat learns from your habits to optimize this schedule.
- **Modes:** Activate "Absent" mode when you're away for an extended period to save energy, or "Antifreeze" mode to prevent pipes from freezing in cold weather.
- **Energy Monitoring:** View your heating history and receive personalized energy-saving reports to help optimize consumption.
- **Auto-Adapt Function:** This intelligent feature anticipates the start of your heating based on your home's insulation and the outdoor temperature, ensuring your desired temperature is reached at the scheduled time.

4.2 Manual Control on the Thermostat

You can also make temporary temperature adjustments directly on the thermostat unit:

- Press the + button to increase the temperature.
- Press the - button to decrease the temperature.
- Manual adjustments will typically override the schedule for a set period (e.g., 3 hours) or until the next scheduled change, depending on your app settings.

4.3 Voice Control

Integrate your Netatmo Thermostat with your preferred voice assistant for convenient control:

- **Apple HomeKit:** Use Siri to control your thermostat (e.g., "Hey Siri, set the thermostat to 21 degrees").
- **Amazon Alexa:** Link your Netatmo account in the Alexa app to use voice commands (e.g., "Alexa, set the living room temperature to 20 degrees").
- **Google Assistant:** Connect your Netatmo account to Google Home for voice control (e.g., "Hey Google, turn up the heat").

5. MAINTENANCE

5.1 Cleaning

To maintain the appearance and functionality of your thermostat, clean it periodically:

- Wipe the surface with a soft, dry cloth.
- Do not use abrasive cleaners, solvents, or chemical sprays, as these can damage the device.

5.2 Battery Replacement

The Netatmo Thermostat is powered by 3 AAA batteries. The app will notify you when the battery level is low. To replace them:

1. Gently remove the thermostat unit from its wall plate or mobile stand.
2. Locate the battery compartment on the back of the unit.
3. Replace the old batteries with 3 new AAA alkaline batteries, ensuring correct polarity.
4. Reattach the thermostat unit. The device will automatically restart.

6. TROUBLESHOOTING

If you encounter issues with your Netatmo Smart Thermostat, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Thermostat not connecting to Wi-Fi	Incorrect Wi-Fi password, weak signal, router issues.	Verify Wi-Fi password. Move the Relay closer to the router. Restart your router. Ensure your Wi-Fi is 2.4 GHz.
Heating not turning on/off	Relay not powered, wiring issue, thermostat batteries low.	Check if the Relay is powered (LED indicator). Verify wiring connections to the boiler. Replace thermostat batteries.
Inaccurate temperature readings	Thermostat placed near heat sources/drafts, calibration needed.	Relocate the thermostat to a more central area. Perform a temperature calibration through the Netatmo Energy app.
App not responding or showing incorrect status	App glitch, internet connectivity issues, server maintenance.	Close and reopen the app. Check your phone's internet connection. Visit Netatmo's status page for server updates.

For more detailed troubleshooting, please refer to the official Netatmo support resources.
