1. Introduction

The Travelpro Maxlite 5 International Carry-On Expandable Rollaboard is designed for efficient and comfortable travel. This lightweight, yet spacious, luggage is suitable for most international airlines and can be used independently or as an accompaniment to checked bags. It features a durable construction with intelligent packing options to enhance your travel experience.

2. Key Features

- **Lightweight Design:** Weighing only 5.4 lbs, this rollaboard is approximately half a pound lighter than previous models, meeting most international carry-on size limits.
- **Durable & Eco-Friendly Construction:** Crafted from stain-resistant polyester with a water-repellent DuraGuard coating for lasting durability. The interior lining is made from 100% post-consumer recycled plastic bottles, contributing to sustainability.
- **Effortless Mobility:** Equipped with two high-performance inline skate wheels for smooth rolling in any direction. The lightweight PowerScope Lite handle offers two adjustable height settings (38" and 42.5") and a contour grip for comfortable control.
- **Expandable & Organized Packing:** Features a high-tensile-strength expandable zipper that allows for up to 2 inches of additional packing capacity. The interior includes a full-length lid pocket, a side accessory pocket, and adjustable hold-down straps to keep contents secure and organized. Two exterior front pockets provide

quick access to essential items.

- **Multiple Carry Handles:** Top, side, and bottom handles are integrated for easy lifting and carrying from various angles.

Figure 2.2: Side view highlighting the water and stain resistant DuraGuard coating, low profile carry handles, and the 2-inch expansion zipper.

Figure 2.3: Interior view with lining made from recycled plastic, a mesh pocket for organization, and adjustable hold-down straps.

3. Setup

3.1 Extending the Handle

To extend the PowerScope Lite handle, press the button located on the top of the handle and pull upwards. The handle has two locking positions at 38 inches and 42.5 inches to accommodate different user heights and preferences. Ensure the handle is fully locked in place before rolling the luggage.

3.2 Initial Packing

Open the main compartment. Utilize the adjustable hold-down straps to secure your clothing and prevent shifting during transit. Place smaller items in the full-length interior lid pocket or the side accessory pocket for easy access and organization. The exterior front pockets are ideal for documents, electronics, or other items you need to reach quickly.

3.3 Using the Expansion Feature

If additional packing space is required, locate the high-tensile-strength zipper around the perimeter of the main compartment. Unzip this section to expand the luggage by up to 2 inches, providing extra volume for your belongings. This feature is designed to maintain stability even when fully expanded.

4. Operating the Luggage

4.1 Rolling the Carry-on

With the PowerScope Lite handle fully extended and locked, tilt the luggage slightly and pull it behind you. The two inline skate wheels are designed for smooth and quiet movement across various surfaces. For optimal control, keep the luggage close to your body.

4.2 Carrying the Luggage

Use the padded top, side, or bottom handles to lift and carry the luggage. These handles provide comfortable grip and make it easy to maneuver the bag into overhead compartments, car trunks, or onto luggage racks.

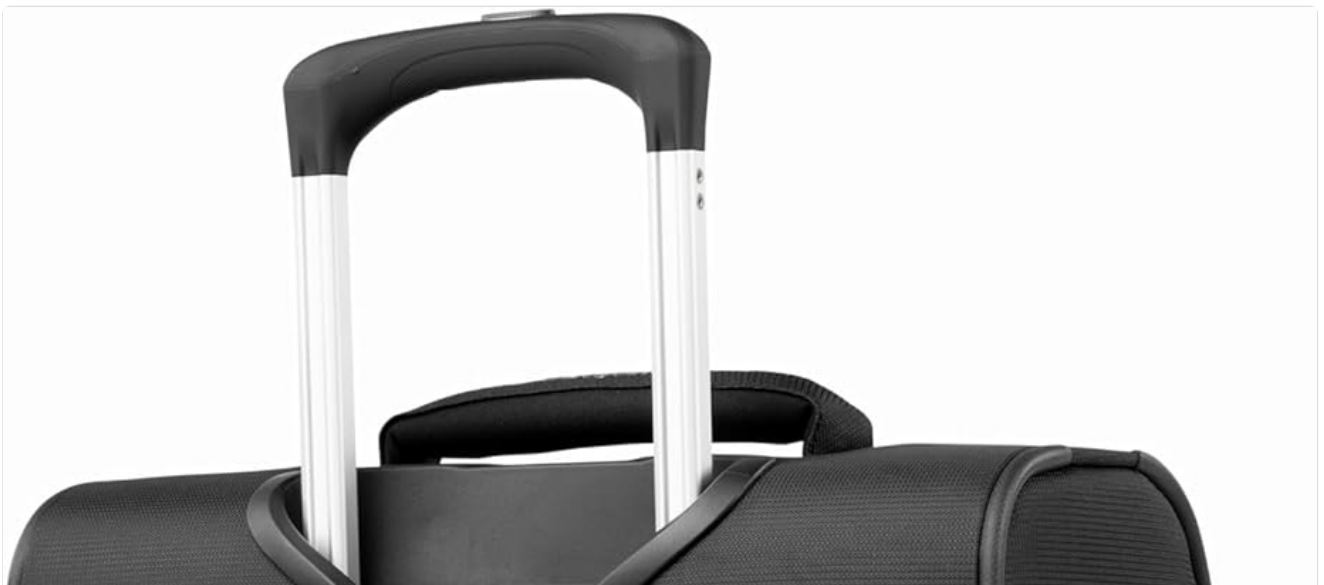

Figure 4.2: Back view of the luggage, illustrating the PowerScope Lite handle in its extended position.

4.3 Overhead Bin Compatibility

The Maxlite 5 International Carry-On is sized to meet most international carry-on requirements. It has been sized bin tested to accommodate overhead bin space on most major US and International airlines. Always verify current airline restrictions before travel.

5. Maintenance

5.1 Cleaning Instructions

The exterior of your Maxlite 5 luggage is made from stain-resistant polyester with a DuraGuard coating. For general cleaning, wipe the surface with a damp cloth and mild soap. Avoid harsh chemicals or abrasive cleaners, as these may damage the coating. For stubborn stains, a soft brush can be used gently.

5.2 Wheel and Handle Care

Periodically check the inline skate wheels for any debris or hair that may impede smooth rolling. Clean as necessary. The PowerScope Lite handle is designed for durability; however, avoid excessive force when extending or retracting it. If the handle becomes stiff, a silicone-based lubricant can be applied sparingly to the telescoping tubes.

5.3 Storage

Store your luggage in a cool, dry place away from direct sunlight when not in use. Ensure the bag is empty and clean before storing to prevent odors or mildew.

6. Troubleshooting

- **Handle is Stiff or Stuck:** Apply a small amount of silicone-based lubricant to the telescoping tubes of the PowerScope Lite handle. Ensure no debris is obstructing the mechanism.
- **Luggage Tips Over When Not Fully Packed:** This can occur with two-wheel rollboards if the weight distribution is uneven or the bag is very light. Pack heavier items towards the bottom of the suitcase to improve stability.
- **Zipper Issues:** If a zipper is difficult to move, try rubbing a pencil lead or a bar of soap along the teeth to lubricate it. Avoid forcing the zipper, as this can cause damage.
- **TSA Lock (if applicable):** The Travelpro Maxlite 5 may feature a TSA-approved lock. If you encounter issues with the lock, please refer to the specific lock instructions provided with your luggage. Note that keys are typically not provided for TSA locks, as they are for TSA agent access only.

7. Specifications
