### 3.1. Tools Required

- Screwdriver (Phillips and flathead)
- Wire strippers/cutters
- Drill (if new mounting holes are needed)
- Pencil

### 3.2. Removing Your Old Thermostat

1. **Turn off Power:** Locate the circuit breaker or fuse box that controls your heating and cooling system and turn off the power. Verify power is off by attempting to adjust the old thermostat.
2. **Remove Cover:** Carefully remove the cover of your old thermostat.
3. **Photograph Wiring:** Take a clear picture of the wiring connections before disconnecting any wires. This will serve as a reference.
4. **Label Wires:** Use the provided labels or masking tape to label each wire with the terminal designation it was connected to (e.g., R, G, Y, W, C).
5. **Disconnect Wires:** Disconnect the wires from the old thermostat terminals.
6. **Remove Mounting Plate:** Unscrew and remove the old thermostat's mounting plate from the wall.

### 3.3. Mounting the New Thermostat

1. **Position Mounting Plate:** Hold the Venstar T2000 mounting plate against the wall, ensuring wires can pass through the opening.
2. **Mark Drill Holes:** Mark the locations for the mounting screws using a pencil.

2. **Common Wire (C-wire):** A common wire (C-wire) is required for continuous power to the Wi-Fi module. If your system does not have a C-wire, consult a qualified HVAC technician for installation.

3. **Double-Check Connections:** Ensure all wires are securely connected and no bare wire is exposed.

### 3.5. Attaching the Thermostat to the Mounting Plate

Once wiring is complete, carefully align the thermostat body with the mounting plate and snap it into place. Ensure it is securely fastened.

### 3.6. Restore Power

Return to your circuit breaker or fuse box and turn the power back on to your heating and cooling system.
