HPL™ technology targets the pigment in hair follicles to disable hair growth without damaging the skin.

Setup and First Use

Watch this official video from Silk'n for a comprehensive guide on setting up and using your Flash&Go Pro device:

Official Silk'n Flash&Go Pro product video demonstrating setup and usage.

Quick Start Guide:

1. Remove the Silk'n Flash&Go™ HAIR REMOVAL UNIT and other components from the packaging.
2. Verify that the DISPOSABLE LAMP CARTRIDGE is inserted properly.
3. Plug the ADAPTOR cord into the Silk'n Flash&Go™ HAIR REMOVAL UNIT.
4. Plug the ADAPTOR into an electrical outlet. The STAND BY INDICATOR on your Silk'n Flash&Go™ is now ready to start.

5. Choose areas to treat that have not had recent exposure to the sun.

6. The skin of the treatment areas should be shaved, clean, dry and free of deodorants. Do not wax, pluck or tweeze the hair out. Shaving is an important step to get the results you want!

7. Press the ON/STBY SWITCH. The POWER ON INDICATOR (green) will turn on.

8. Approximately 3.5 seconds after pressing the ON/STBY SWITCH, the fan sound (similar to the sound of a hairdryer) will start. The device is then ready for you to trigger the energy level.

9. If this is your first treatment, choose the energy level. Flash&Go has 5 levels (1 the lowest to 5 the highest). To choose the right energy level for your treatment area separately.

OPERATING THE DEVICE

The Silk'n Flash&Go Pro utilizes advanced technology for effective hair removal. The device features a skin tone sensor and a movement sensor to ensure safe and efficient operation.

- **Power Levels:** The device offers 5 adjustable energy levels. Start with a lower level and gradually increase as your skin tolerates.
- **Skin Tone Sensor:** The integrated skin tone sensor automatically detects your skin complexion. If the skin is too dark for a safe treatment at the selected energy level, the device will adjust the power down or prevent flashing.
- **Touch&Glide Technology:** This feature allows for continuous flashing as you glide the device over your skin, making treatments quicker and more convenient.
- **Movement Sensor:** The device will only flash when it is in full contact with the skin and moving, ensuring precise application.
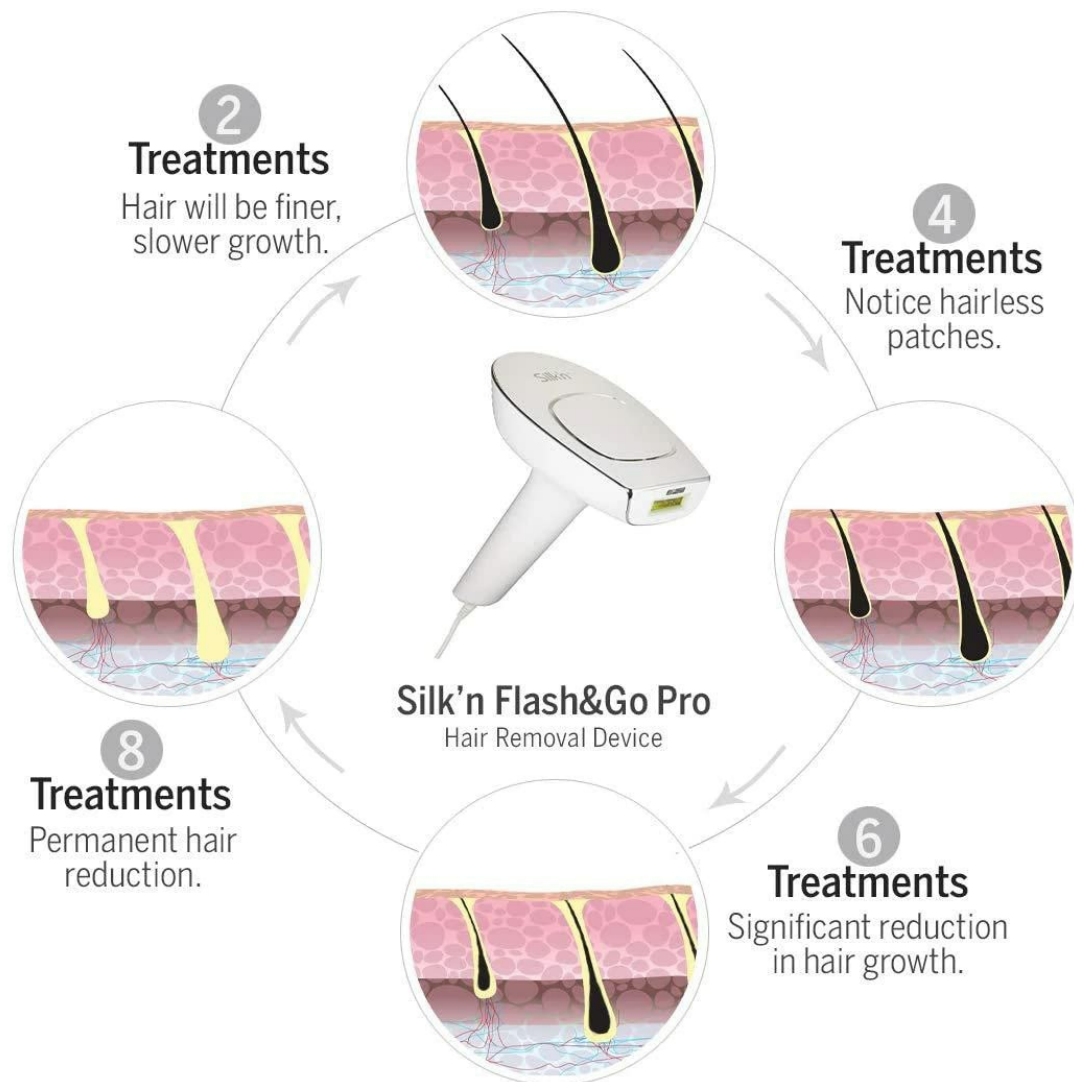

Applying the Silk'n Flash&Go Pro to the skin for treatment.

TREATMENT SCHEDULE

For optimal results, follow the recommended treatment schedule:

- **Treatments 1-4:** Plan two weeks apart.
- **Treatments 5-7:** Plan four weeks apart.
- **Treatments 8+:** Treat as needed, until desired results are achieved.

Treatments

2 Treatments
Hair will be finer, slower growth.

4 Treatments
Notice hairless patches.

8 Treatments
Permanent hair reduction.

6 Treatments
Significant reduction in hair growth.

Silk'n Flash&Go Pro
Hair Removal Device

* Based on bi-weekly treatment schedule.

Consistent application according to the schedule is key for effective hair reduction.

SAFETY GUIDELINES AND CONTRAINDICATIONS

It is crucial to read and understand all safety information before using the Silk'n Flash&Go Pro. This device is not designed for everyone. Please consult a doctor or dermatologist if you are unsure.

Warnings:

- **Skin Tone:** Do not use Silk'n Flash&Go on naturally dark skin complexion. The device focuses on pigments, and darker skin tones may experience adverse effects such as redness and discomfort. Refer to the color skin chart in the inner cover of the manual for compatibility.
- **Sun Exposure:** Do not use on tanned skin or after recent sun exposure (including artificial tanning machines). Do not expose treated areas to the sun.
- **Eye Safety:** Never use Silk'n Flash&Go around or near the eyes.
- **Skin Conditions:** Do not treat on tattoos or permanent makeup, dark brown or black spots (such as large freckles, birth marks, moles or warts), nipples, genitals or lips.

- **Medical Conditions:** Do not treat on active eczema, psoriasis, lesions, open wounds or infections (cold sores), or abnormal skin conditions caused by systemic or metabolic diseases (e.g., diabetes). Light-based treatments can cause adverse reactions on already sensitive areas.

Illustration of body areas generally suitable for treatment. Always refer to safety guidelines.

MAINTENANCE

To ensure the longevity and optimal performance of your Silk'n Flash&Go Pro, regular maintenance is recommended:

- **Cleaning:** After each use, ensure the device is unplugged and cool. Gently wipe the flash window and the surrounding area with a soft, dry cloth. Do not use abrasive cleaners or harsh chemicals.
- **Storage:** Store the device in its original packaging or a protective case in a cool, dry place away from direct sunlight and moisture.
- **Lamp Cartridge:** The Flash&Go Pro is designed for lifetime flashes, meaning no refill cartridges are needed. However, ensure the lamp cartridge area is kept clean.

TROUBLESHOOTING

If you encounter any issues with your Silk'n Flash&Go Pro, refer to the following common troubleshooting tips:

- **Device Not Flashing:** Ensure the device is properly plugged into a working electrical outlet. Verify that the skin tone sensor is in full contact with the skin and that your skin tone is compatible with the device's safety parameters. The device will not flash if skin contact is not detected or if the skin is too dark.
- **Blinking Indicator Lights:** If certain indicator lights are blinking, it may signal a specific issue. Refer to the detailed manual for specific blinking patterns and their corresponding solutions. For example, a blinking light might indicate the need for a flash replacement (though this model is designed for lifetime flashes, older models or specific issues might trigger such warnings).
- **Device Getting Hot:** It is normal for the device to warm up during use. However, if it becomes excessively hot or uncomfortable, discontinue use and allow it to cool down. Ensure proper ventilation around the device during operation.
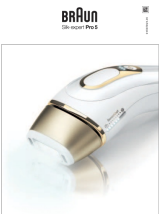

SPECIFICATIONS

Feature	Detail
Product Dimensions	4.88 x 8.13 x 8.13 inches; 11.48 ounces
