## 2. Key Features and Design

- **Resin Coated Steel Wall:** The pool wall is constructed from super strong steel, hot-dip galvanized and resin-coated on both interior and exterior surfaces for superior protection against rust and extended longevity.
- **Antilles Dolphin Pattern Liner:** Features a vibrant Antilles Dolphin pattern, crafted from 100% virgin vinyl. This overlap liner is designed to fold over the pool wall and is secured with coping strips.
- **All-Year Durability:** Engineered to remain in place year-round, with exact-fit components designed to prevent corrosion and simplify installation.
- **Included Components:** Comes with a 25 Gauge Antilles Dolphin Overlap liner, a Widemouth Skimmer, and coping strips for liner installation.

## 3. Setup and Installation

### 3.1 Site Preparation

Select a level, stable area for your pool. Ensure the ground is free of sharp objects, roots, and debris. Proper site preparation is crucial for the pool's stability and longevity.

## 3.2 Pool Wall Assembly

The pool wall is designed with pre-drilled cutouts for the skimmer, suction, and discharge for the pump. Assemble the wall sections according to the included hardware and instructions. This process typically requires multiple individuals for safe and efficient assembly.

## 3.3 Liner Installation

The Antilles Dolphin Overlap liner is designed to fold over the top of the pool wall. Before installation, lay the liner out in direct sunlight for at least one hour. This allows the vinyl to warm up and become more pliable, ensuring it stretches properly when water is added. Optimal installation temperatures are between 70-80 degrees Fahrenheit (21-27 degrees Celsius). Secure the liner in place using the provided coping strips.

### 3.4 Skimmer Installation

Install the widemouth skimmer into the pre-drilled cutout in the pool wall. Ensure all gaskets are properly seated to prevent leaks. The skimmer includes necessary gaskets, a weir (flapper) door, and a skim vac connection.

## 4. Operation

### 4.1 Filling the Pool

Once the pool structure and liner are securely in place, begin filling the pool with water. Monitor the liner as it fills to ensure it stretches evenly and settles correctly. The estimated water capacity for this pool is 13,000 - 14,500 gallons.

### 4.2 Water Chemistry

Maintain proper water chemistry by regularly testing and balancing pH, chlorine, and alkalinity levels. Consult a pool supply professional for specific chemical recommendations and dosage instructions.

## 5. Maintenance

### 5.1 Regular Cleaning

Regularly skim debris from the water surface and vacuum the pool floor to keep the water clean. Clean the skimmer basket frequently to ensure optimal water circulation.

### 5.2 Winterization

Although designed for year-round use, proper winterization procedures are recommended in colder climates to protect the pool and its components from freezing damage. Consult local pool professionals for specific winterization guidelines.

### 5.3 Corrosion Prevention

The pool's steel walls are resin-coated for protection. To maximize longevity, regularly inspect the pool walls for any signs of wear or damage to the coating. Address any issues promptly to prevent corrosion.

## 6. Troubleshooting

### 6.1 Missing Components

Upon delivery, carefully inspect all packages and components against the packing list. If any parts are missing or damaged, contact the manufacturer or retailer immediately for assistance.

### 6.2 Liner Wrinkles

Minor wrinkles in the liner can often be smoothed out during the initial filling process. Ensure the liner was adequately

warmed in the sun before installation. If significant wrinkles persist, consult the liner installation guide or a professional.

### 6.3 General Inquiries

Refer to the Frequently Asked Questions section provided with your product documentation for common questions regarding pool setup and use. For issues not covered, contact customer support.
