## INSTALLATION INSTRUCTIONS

---

- 1. Locate the Filter Compartment:** The water filter is typically located inside the refrigerator compartment, often in the upper right corner or a designated drawer.
- 2. Remove the Old Filter:**
  - Open the filter cover or access panel.
  - Twist the old filter counter-clockwise to unlock it.
  - Pull the old filter straight out. Be prepared for a small amount of water leakage.
- 3. Prepare the New Filter:**
  - Remove the new filter from its packaging.
  - Carefully remove the protective cap from the inlet of the filter. Ensure the O-rings are properly seated.
- 4. Install the New Filter:**
  - Align the new filter with the filter housing. The filter may have an arrow or specific alignment marks.
  - Push the filter firmly into the housing until it stops.
  - Turn the filter clockwise 90 degrees (a quarter turn) until it locks into place. You may hear a click.
  - Close the filter cover or access panel.
- 5. Flush the System:**
  - After installation, dispense approximately 3-4 gallons of water through the dispenser to flush out any air and carbon fines from the new filter. This ensures optimal water quality.
- 6. Reset the Filter Indicator:**
  - Refer to your refrigerator's control panel for specific instructions on how to reset the water filter indicator light. This often involves holding down a "Max Ice" and "Max Cool" button simultaneously for a few seconds, or a dedicated "Filter Reset" button.

## OPERATING AND MAINTENANCE
