Red Lion Controls/N-Tron PAXD0000 Universal DC Input Meter User Manual

MODEL: PAXD0000

1. Introduction

This manual provides essential information for the safe and efficient installation, operation, and maintenance of the Red Lion Controls/N-Tron PAXD0000 Universal DC Input Meter. Please read this manual thoroughly before using the device and retain it for future reference.

The PAXD0000 is designed for universal DC input measurement applications, offering reliable performance in industrial environments.

2. Safety Information

Always observe standard safety precautions during installation and operation. Failure to comply with safety warnings may result in injury or damage to the equipment.

- Ensure power is disconnected before performing any wiring or maintenance.
- Installation and servicing should only be performed by qualified personnel.
- Do not operate the device in environments exceeding its specified operating conditions.
- Protect the device from moisture, dust, and extreme temperatures.

3. Product Overview

The Red Lion PAXD0000 Universal DC Input Meter features a clear digital display and intuitive control buttons for easy configuration and monitoring.

Figure 1: Front panel of the PAXD0000 meter. This image shows the front panel of the PAXD0000 meter, featuring a red digital display showing '67.4 %' and five control buttons labeled DSP, PAR, F1, F2, and RST.

Front Panel Components:

- **Digital Display:** High-visibility red LED display for showing measured values and menu parameters.
- **DSP Button:** Used for display functions and navigating through display modes.
- **PAR Button:** Used for accessing and setting parameter configurations.
- **F1 Button:** Function button 1, typically for specific user-defined actions or menu navigation.
- **F2 Button:** Function button 2, typically for specific user-defined actions or menu navigation.
- **RST Button:** Reset button, used for resetting values or confirming selections.

4. Setup

4.1. Installation

The PAXD0000 is designed for panel mounting. Ensure adequate space for ventilation and wiring connections.

1. Cut a panel cutout of the specified dimensions (refer to the product datasheet for exact measurements).
2. Insert the meter into the cutout from the front.
3. Secure the meter using the provided mounting clips from the rear of the panel.

4.2. Wiring

Refer to the wiring diagram provided with your device for specific terminal connections. Ensure all connections are secure and correctly polarized.

- **Power Supply:** Connect the appropriate DC power supply to the designated power terminals. Verify voltage compatibility.
- **Input Signal:** Connect the DC input signal to the input terminals. Observe polarity for accurate readings.
- **Output Connections (if applicable):** If your model includes output options (e.g., relays, analog output), connect them according to your system requirements.

4.3. Powering On

Once all wiring is complete and verified, apply power to the device. The display should illuminate, and the meter will perform a self-test before showing the measured value.

5. Operating Instructions

5.1. Basic Measurement Display

Upon power-up, the meter will typically display the primary measured DC input value. Use the **DSP** button to cycle through various display modes, such as minimum, maximum, or other configured values.

5.2. Parameter Configuration

To access and modify device parameters:

1. Press the **PAR** button to enter the parameter menu.
2. Use the **F1** and **F2** buttons to navigate through the parameters.
3. Press **RST** to select a parameter for editing.
4. Use **F1** and **F2** to change the parameter value.
5. Press **RST** again to confirm the new value and save it.

6. Press **PAR** to exit the parameter menu.

Common parameters include input scaling, decimal point position, and alarm setpoints. Refer to the detailed programming guide for a complete list of parameters and their functions.

6. Maintenance

6.1. Cleaning

Clean the front panel with a soft, damp cloth. Do not use abrasive cleaners or solvents, as these may damage the display or housing.

6.2. Calibration

The PAXD0000 is factory calibrated. If recalibration is required, refer to the advanced programming manual or contact Red Lion technical support. Recalibration should only be performed by trained personnel using certified equipment.

7. Troubleshooting

This section provides solutions to common issues. For problems not listed here, contact technical support.

Problem	Possible Cause	Solution
Display is blank	No power, incorrect wiring, or power supply failure.	Check power connections and supply voltage. Verify wiring against the diagram.
Incorrect readings	Incorrect input wiring, scaling errors, or sensor issue.	Verify input wiring polarity. Check parameter settings for scaling. Test input signal with a known source.
Buttons unresponsive	Temporary software glitch or physical damage.	Cycle power to the device. If problem persists, contact support.

8. Specifications

Feature	Detail
Model	PAXD0000
Brand	Red Lion
Manufacturer	Red Lion Controls
Input Type	Universal DC Input
