OASE BioMaster 250 External Aquarium Filter Instruction Manual

Model: BioMaster 250 (Item Number: 55145)

1. INTRODUCTION

The OASE BioMaster 250 is an external canister filter designed for aquariums up to 70 gallons (250 liters). This filter provides multi-stage filtration to maintain optimal water quality and clarity in both freshwater and marine environments. Its design emphasizes ease of maintenance and quiet operation.

This manual provides detailed instructions for the safe and efficient installation, operation, and maintenance of your OASE BioMaster 250 filter. Please read all instructions carefully before use and retain this manual for future reference.

2. SAFETY INFORMATION

- Always disconnect power to the filter and any other aquarium equipment before performing maintenance or handling the filter.
- Ensure the filter is placed on a stable, level surface below the aquarium water level to facilitate proper operation and priming.
- Do not operate the filter if the power cord or plug is damaged.
- This appliance is intended for indoor use only.
- Keep out of reach of children.
- Follow all directions included in the package.

3. PRODUCT OVERVIEW

The OASE BioMaster 250 external filter integrates several key features for effective aquarium filtration:

- **Multi-stage Filtration:** Combines biological, mechanical, chemical, and prefiltration stages.
- **EasyClean Pre-Filter Module:** A removable pre-filter for quick and easy cleaning without disassembling the main filter.
- **Hel-X Biomeida:** Suspended filter media designed to provide a large settlement surface for beneficial microorganisms, aiding in nutrient reduction and toxin removal.

- **Sealed Filtration Pathway:** Ensures water flows efficiently through all filtration stages.
- **Heater Integration Capability:** Allows for the integration of an OASE HeatUp adjustable heater (sold separately) directly into the canister.
- **Quiet Operation:** Engineered for minimal noise during use.

PRO

Figure 3.4: Detailed view of the EasyClean Pre-Filter Module, Hel-X Biomeida, and the integrated heater slot.

Engineered with 4-stage sealed filtration: biological, mechanical, chemical and pre-filter. The specially designed sealed pathway ensures the water flows through all filter media, providing optimal filtration and clear water. All BioMaster features the OASE exclusive Hel-X Biomedia which provides a large settlement surface for microorganisms, ideal for nutrient reduction and removal of toxins.

4. SETUP AND INSTALLATION

Before beginning installation, ensure all components are present and undamaged. The package includes the aquarium filter with filter media, tubing, intake and outflow tubes, diffuser, spray bar, fittings, heater adapter, and power cable.

4.1 Component Assembly

1. **Prepare Filter Media:** Ensure all filter media (pre-filter foams, biological media, chemical media) are correctly placed in their respective baskets within the filter canister. Refer to the internal diagrams for correct layering.
2. **Connect Hoses:** Attach the intake and outflow hoses to the filter head unit. Secure them with the provided fittings.
3. **Install Intake and Outflow Tubes:** Place the intake tube (with strainer) and outflow tube (with diffuser or spray bar) inside the aquarium. Secure them to the aquarium rim using suction cups or clips.
4. **Position the Filter:** Place the filter canister on a stable surface below the aquarium water level. This is crucial for proper water flow and self-priming.

4.2 Priming the Filter

The BioMaster 250 features a self-priming function for easy startup:

1. Ensure all hose connections are secure and the filter is positioned correctly.
2. Open the inlet and outlet valves on the filter head.
3. Press the priming button (usually located on top of the filter head) repeatedly until water begins to flow

into the filter and fill the canister. This may take several presses.

4. Once water fills the canister and flows through the outflow tube, connect the power cable to an electrical outlet. The filter pump will start, and water circulation will begin.

Figure 4.2: A person adjusting the OASE BioMaster filter placed inside an aquarium cabinet, demonstrating typical installation below the tank.

5. OPERATING INSTRUCTIONS

Once installed and primed, the OASE BioMaster 250 operates continuously to filter your aquarium water.

- **Flow Adjustment:** The inlet and outlet adapters feature flow control levers. These can be adjusted to regulate the water flow rate according to your aquarium's needs.
- **Diffuser/Spray Bar:** The included diffuser or spray bar can be used to create uniform surface movement and enhance dissolved oxygen levels in the aquarium.
- **Heater Integration (Optional):** If you have an OASE HeatUp adjustable heater, it can be integrated into the filter canister for a cleaner aquarium aesthetic. Follow the heater's specific instructions for installation into the BioMaster.

What's Included

6. MAINTENANCE

Regular maintenance is essential for the optimal performance and longevity of your OASE BioMaster 250 filter.

6.1 EasyClean Pre-Filter Module Cleaning

The EasyClean pre-filter module allows for quick cleaning without opening the main filter canister:

1. **Disconnect Power:** Always unplug the filter from the power outlet before any maintenance.
2. **Remove Pre-Filter Module:** Unlock and carefully pull out the pre-filter module from the top of the filter head.
3. **Rinse Foams:** Remove the pre-filter foams and rinse them thoroughly under running aquarium water (or dechlorinated tap water) until clean. Avoid using untreated tap water as it can harm beneficial bacteria.
4. **Reassemble:** Place the cleaned foams back into the module and reinsert the module into the filter head, ensuring it locks securely.
5. **Reconnect Power:** Plug the filter back into the power outlet.

This pre-filter should be cleaned every 1-2 weeks, depending on aquarium bioload and debris accumulation.

Module can be removed separately from the rest of the filter. This reduces maintenance, increases filter efficiency, and extends the life of main filter foams.

FAST & EASY

Figure 6.1: A hand demonstrating the removal of the EasyClean Pre-Filter Module from the top of the OASE BioMaster filter for routine cleaning.

6.2 Full Filter Cleaning (Main Canister)

The main filter canister, including biological and chemical media, requires less frequent cleaning, typically every 3-6 months or as needed based on flow reduction.

1. **Disconnect Power:** Unplug the filter.
2. **Engage Aquastop:** Close the inlet and outlet valves on the filter head. The aquastop mechanism allows you to disconnect the hose assembly without water leakage, keeping the tubes in the aquarium.
3. **Remove Filter Head:** Release the locking clips and carefully lift the filter head from the canister.
4. **Clean Media Baskets:** Remove the media baskets. Rinse mechanical filter foams and biological media in old aquarium water to preserve beneficial bacteria. Replace chemical media (e.g., activated carbon) as recommended by the manufacturer, typically monthly.
5. **Clean Canister and Impeller:** Clean the inside of the canister and inspect the impeller for debris.
6. **Reassemble:** Reassemble the media baskets, ensuring they are correctly stacked. Secure the filter

head onto the canister, ensuring all clips are locked.

7. **Reconnect Hoses and Prime:** Reconnect the hose assembly, open the valves, and prime the filter as described in Section 4.2.
8. **Reconnect Power:** Plug the filter back in.

No mess maintenance

The aquastop is designed to implement easy filter maintenance. Unlock and easily remove the aquastop. This way the tubes remain in order in the aquarium and you can move the external filter freely without water leakage.

Figure 6.2: The aquastop feature on the OASE BioMaster filter, allowing for easy disconnection of hoses from the filter head without water spillage during maintenance.

7. TROUBLESHOOTING

This section addresses common issues you might encounter with your OASE BioMaster 250 filter.

Problem	Possible Cause	Solution
---------	----------------	----------

Problem	Possible Cause	Solution
No water flow or reduced flow	◦ Power disconnected ◦ Air in the system ◦ Clogged pre-filter or main filter media ◦ Kinked hoses ◦ Impeller obstructed	◦ Check power connection. ◦ Re-prime the filter (Section 4.2). ◦ Clean pre-filter (Section 6.1) or perform full filter cleaning (Section 6.2). ◦ Straighten hoses. ◦ Inspect and clean the impeller.
Filter is noisy or vibrating	◦ Air trapped in the system ◦ Impeller obstructed or damaged ◦ Filter not level	◦ Re-prime the filter to remove air. ◦ Clean or replace the impeller. ◦ Ensure the filter is on a stable, level surface.
Water leakage	◦ Improperly sealed filter head ◦ Damaged O-ring or gasket ◦ Loose hose connections	◦ Ensure filter head clips are fully engaged. ◦ Inspect and lubricate or replace O-rings/gaskets. ◦ Tighten all hose connections.
Air purging into the tank (bubbles)	◦ Air trapped in the system (common after maintenance) ◦ Restriction at the intake (e.g., clogged pre-filter sponge, plant debris) ◦ Loose connections allowing air ingress ◦ Cavitation due to insufficient water supply	◦ Re-prime the filter thoroughly. ◦ Clean the intake strainer and pre-filter sponge. Ensure no debris obstructs water flow into the intake. ◦ Check all hose connections and O-rings for proper sealing. ◦ Ensure the filter is below the water level and the intake is fully submerged.

FiltoSmart und FiltoSmart Thermo Außenfilter – clever und kompakt für mittelgroße Aquarien

Die Einstufigen Filter der Serie FiltoSmart eignen sich für kleine und mittelgroße Aquarien von 60 bis 300 Litern mit metallischem Flachwasser. Sie sind mit oder ohne flapsfähiger HeatsUp erhältlich (ab FiltoSmart 100) und verfügen über ein hohes Filtervolumen, welches dank mehrstufiger, biologisch-mechanischer Filtration mühelos für glasklares Wasser sorgt – und das bei kompakter Größe. Die FiltoSmart-Reihe arbeitet besonders leise und energiesparend. Die Selbstreinigungsfunktion sorgt für einen unkomplizierten Betrieb, und die Abgaberücklaufkontrolle verhindert ungewünschten Wasserverlust bei der Filterreinigung (ab FiltoSmart 100).

FiltoSmart und FiltoSmart Thermo external filters – clever and compact for medium-sized aquariums

The entry-level filters of the FiltoSmart series are suitable for small and medium-sized aquariums from tank sizes 60 to 300 litres with medium fish stock. They are available with or without the HeatsUp adjustable heater (from FiltoSmart 100) and have a high filter volume, which thanks to multi-stage, biological-mechanical filtration effortlessly ensures crystal-clear water – and they do so in the compact size. The FiltoSmart series of filters are particularly quiet in operation and very energy-efficient. The self-cleaning function ensures operation without complications, and the shut-off automation prevents undesirable water escaping when cleaning the filter (from FiltoSmart 100).
