6. Operation

The Fosmon HDMI Switch offers both automatic and manual switching capabilities.

6.1 Automatic Switching

The switch is designed with intelligent switching. When you power on a connected HDMI source device, the switch will automatically detect the active signal and switch to that input. If multiple devices are powered on, it will typically switch to the most recently activated device.

6.2 Manual Switching

To manually switch between connected devices, press the circular button on the top of the HDMI switch. Each press will cycle through the available HDMI input ports (1, 2, 3). The blue LED indicators will illuminate to show which input

is currently active.

7. Maintenance

- Keep the device in a dry environment, away from moisture and extreme temperatures.
- Clean the exterior with a soft, dry cloth. Do not use liquid cleaners or aerosols.
- Avoid placing heavy objects on the switch or bending the integrated cable excessively.
- Ensure proper ventilation around the device.

8. Troubleshooting

- **No Signal or Flickering Image:**

- Ensure all HDMI cables are securely connected to both the switch and your devices/display.
- Try connecting the optional micro-USB power cable to the switch. Some devices or longer cable runs may require additional power.
- Test with different HDMI cables, as faulty cables can cause signal issues.
- Ensure your display is set to the correct HDMI input.

- **Automatic Switching Not Working:**

- Ensure the source device is fully powered on and outputting an HDMI signal.
- Some devices may not provide a consistent power signal through HDMI, affecting auto-switching. Use the manual switch button if auto-switching is unreliable.
- Try power cycling the source devices and the display.

- **Resolution or HDR Issues:**

- Verify that all connected devices (source and display) support 4K@60Hz and HDR.
- Ensure you are using high-speed HDMI cables rated for 4K@60Hz and HDR.
