Follow these steps for proper installation of your washing machine:

1. **Unpacking:** Carefully remove all packaging materials. Inspect the machine for any transit damage.

6. **Start Cycle:** Press the 'Start' button to begin the wash cycle. The machine will automatically fill with water, wash, rinse, and spin according to the selected program.
7. **End of Cycle:** Once the cycle is complete, the machine will signal. Carefully remove your laundry.

For specific program details and recommended load sizes, refer to the program chart usually found on the inside of the lid or in a separate quick-start guide.

6. MAINTENANCE

Regular maintenance ensures the longevity and optimal performance of your washing machine:

- **Cleaning the Exterior:** Wipe the exterior of the machine with a soft, damp cloth. Do not use abrasive cleaners or solvents.

- **Cleaning the Inner Tub:** Periodically run a 'Tub Clean' cycle (if available) or a hot wash cycle with a washing machine cleaner to remove detergent residue and odors.
- **Detergent Dispenser:** Clean the detergent dispenser regularly to prevent buildup. Remove and rinse it under running water if possible.
- **Lint Filter:** Check and clean the lint filter (if present) after every few washes to ensure efficient drainage and prevent lint transfer to clothes.
- **Water Inlet Filters:** Periodically check the filters in the water inlet hoses for blockages and clean them if necessary. Turn off water supply before disconnecting hoses.
- **Drain Hose:** Ensure the drain hose is free from kinks and blockages.
- **Storage:** If storing the machine for an extended period, drain all water, unplug it, and leave the lid slightly ajar to prevent mildew.
