Problem	Possible Cause / Solution
Drive not recognized by computer.	- Ensure the USB cable is securely connected to both the drive and the computer's USB port. - Try a different USB port on your computer. - For desktops, connect to a USB port on the motherboard (rear ports) for better power supply. - Restart your computer.

Problem	Possible Cause / Solution
Disc stuck inside the drive.	○ Locate the small forced ejection hole on the front of the drive (next to the eject button). ○ Gently insert a straightened paperclip into the hole and push until the tray ejects.

Cannot burn discs.	○ Ensure you are using a blank, recordable CD-R/RW or DVD-R/RW disc. ○ Verify that your burning software is correctly configured and updated. ○ Check if there is enough free space on the disc.
