- **Temperature:** Avoid exposing the watch to extreme temperatures (hot or cold) or sudden temperature changes, as this can affect the movement and battery life.
- **Magnetic Fields:** Keep the watch away from strong magnetic fields, which can interfere with the quartz movement's accuracy.
- **Battery Replacement:** The watch is powered by a quartz battery. When the watch stops or the second hand moves erratically, it indicates a low battery. Battery replacement should be performed by a qualified watch technician.
