# Jura Milk Tube with Stainless Steel Casing HP1 User Manual

Model: 700057366

## 1. INTRODUCTION

The Jura Milk Tube with Stainless Steel Casing HP1 is an accessory designed to enhance the milk system of your Jura coffee machine. It provides a durable and aesthetically pleasing connection between the milk container and the coffee machine's milk spout, ensuring optimal milk hygiene and contributing to the elegant design of your appliance.

This manual provides essential information for the proper installation, use, and maintenance of your Jura Milk Tube HP1. Please read it carefully before first use and keep it for future reference.

## 2. PRODUCT OVERVIEW

The Jura Milk Tube HP1 consists of an inner plastic tube encased within a high-quality stainless steel spring. This design offers several benefits:

- **Enhanced Durability:** The stainless steel casing protects the inner tube from external damage.
- **UV Protection:** The opaque casing material provides optimum protection against UV rays and the effects of light, which helps maintain milk quality.
- **Aesthetic Integration:** The stainless steel finish complements the design of Jura coffee machines.
- **Precision-Fit Connectors:** Ensures airtight connections for reliable milk delivery.

### 3. COMPATIBILITY

The Jura Milk Tube with Stainless Steel Casing HP1 is compatible with various Jura coffee machine models that feature a milk system requiring an external milk tube connection. Known compatible models include:

- Jura WE8
- Jura ENA 8
- Jura Micro 90
- Jura E6
- Jura D6

For other models, please consult your coffee machine's manual or the Jura website to confirm compatibility with the HP1 milk tube.

## 4. SETUP AND INSTALLATION

---

Follow these steps to properly connect the Jura Milk Tube HP1 to your coffee machine:

1. **Unpack the Milk Tube:** Carefully remove the milk tube from its packaging.
2. **Determine Length:** The milk tube comes pre-assembled at a length of 23 cm (approximately 9.06 inches). This length is generally recommended for optimal performance and aesthetics. If necessary, the inner plastic tube can be trimmed to a shorter desired length, but ensure it is not too short to reach both the milk container and the machine's spout.
3. **Connect to Milk Container:** Attach one end of the milk tube's connector firmly to the outlet of your Jura milk container or milk cooler. Ensure a secure, airtight fit.
4. **Connect to Coffee Machine:** Attach the other end of the milk tube's connector to the milk spout or designated milk intake port on your Jura coffee machine. Again, ensure a firm and airtight connection.
5. **Positioning:** Arrange the milk tube so it is not kinked or pinched, allowing for smooth milk flow.

The milk tube is ready for use immediately after proper connection.

## 5. OPERATING INSTRUCTIONS

---

The Jura Milk Tube HP1 functions as a conduit for milk within your Jura coffee machine's milk system. Its operation is integrated with the coffee machine's milk frothing and dispensing functions.

- Ensure the milk tube is correctly connected to both the milk container and the coffee machine before initiating any milk-based beverage preparation.
- Follow the specific instructions in your Jura coffee machine's user manual for preparing milk-based specialties (e.g., lattes, cappuccinos). The milk tube will facilitate the drawing of milk from the container to the machine's frothing system.
- Always ensure there is sufficient milk in the container for the desired beverage.

## 6. MAINTENANCE AND CLEANING

---

Regular cleaning and maintenance of the milk tube are crucial for optimal hygiene and performance. Milk residues can quickly build up and affect taste and machine function.

- **Daily Cleaning:** After each day of use, or after preparing milk, it is highly recommended to clean the milk tube. Refer to your Jura coffee machine's cleaning program for the milk system, which typically involves rinsing the milk tube with water and a specialized milk system cleaner.
- **Disassembly for Cleaning:** For thorough cleaning, the milk tube can be disconnected from both the machine and the milk container. The inner plastic tube can be carefully removed from the stainless steel casing for separate cleaning if necessary.
- **Replacement of Inner Tube:** The inner plastic tube should be replaced approximately every three months to ensure continued hygiene and prevent blockages. Replacement tubes are typically included with new Jura milk tubes or can be purchased separately.
- **Inspection:** Periodically inspect the milk tube for any signs of wear, damage, or discoloration. Replace the entire milk tube if the stainless steel casing or connectors are damaged.

## 7. TROUBLESHOOTING

---

If you experience issues with milk delivery or frothing, consider the following common troubleshooting steps related to the milk tube:

- **No Milk Flow / Poor Froth:**
  - Ensure the milk tube is securely connected at both ends and there are no air leaks.
  - Check if the milk tube is kinked or pinched. Straighten it if necessary.
  - Verify that the milk container has sufficient milk.
  - Perform a thorough cleaning of the milk system and the milk tube, as blockages from dried milk residue are common.
  - If the inner plastic tube is old, consider replacing it.
- **Unusual Taste in Milk:**
  - This often indicates a need for a more thorough cleaning of the milk system and tube.
  - Ensure you are using fresh, cold milk.
- **Tube Disconnection:**
  - Ensure connectors are fully pushed in until they click or feel secure.
  - Inspect connectors for damage; if damaged, the tube may need replacement.

If problems persist, consult your Jura coffee machine's main user manual or contact Jura customer

support.

## 8. SPECIFICATIONS

---

<b>Brand</b>	Jura
<b>Model Name</b>	Milk Tube with Stainless Steel Casing HP1
<b>Item Model Number</b>	700057366
