LAUNCH X431 V

LAUNCH X431 V PRO 4.0 Bidirectional Scan Tool User Manual

Model: X431 V | Brand: LAUNCH

1. Introduction

The LAUNCH X431 V PRO 4.0 is an advanced automotive diagnostic scan tool designed for professional technicians and repair shops. It offers comprehensive OE-level diagnostics, bidirectional control, ECU coding, and over 37 special service functions. This manual provides detailed instructions for setting up, operating, maintaining, and troubleshooting your device to ensure optimal performance and longevity.

Figure 1.1: The LAUNCH X431 V PRO 4.0 diagnostic tablet and its comprehensive set of connectors, neatly organized within its protective carrying case.

2. Setup and Initial Configuration

Follow these steps to prepare your LAUNCH X431 V PRO 4.0 for first use.

2.1 Unboxing and Component Check

Carefully unpack all components from the carrying case. Verify that all items listed in the accessory list are present and undamaged.

2.2 Charging the Device

Connect the provided power adapter to the device and a power outlet. Allow the device to fully charge before initial use. The battery indicator on the screen will show charging status.

2.3 Power On and Initial Setup

1. Press and hold the power button until the LAUNCH logo appears.
2. Follow the on-screen prompts to select your preferred language, time zone, and connect to a Wi-Fi network. A stable internet connection is crucial for software updates and online functions.
3. Register your device if prompted. This typically involves creating a LAUNCH account or logging into an existing one.

3. Operating the Device

This section details the primary diagnostic and service functions of the LAUNCH X431 V PRO 4.0.

3.1 OE-Level Full-Systems Diagnostics

The tool provides comprehensive diagnostics for all available vehicle systems, including Engine, Transmission, ABS, SRS, and more. It allows you to read and clear Diagnostic Trouble Codes (DTCs), view live data streams, and retrieve ECU information.

Figure 3.1: Overview of OE-level full-system diagnostics capabilities, including reading/clearing codes, live data, and ECU information, alongside a selection of 37+ special service functions like oil reset, brake reset, and TPMS reset.

3.2 Bi-Directional Control (Active Tests)

Perform active tests to send commands to vehicle ECUs and monitor actuator operation. This function helps quickly identify faulty components by directly testing their functionality (e.g., turning on/off radiator fan, testing windows/doors, injector buzz test, fuel pump test).

3.3 Advanced ECU Coding & Online Coding

This feature allows for advanced ECU coding, including online coding to update vehicle ECU software, refreshing hidden features, matching components after replacement, and customizing OE settings to enhance vehicle performance.

Figure 3.2: Demonstrates the ECU Coding capabilities for optimizing vehicle performance and the Bi-Directional (Active Test) functions for quickly identifying and locating issues by controlling various vehicle components.

3.4 Special Functions (37+ Maintenance)

The tool supports over 37 common maintenance functions, including but not limited to:

- Oil Reset
- Brake Reset
- TPMS Reset
- Battery Registration
- ABS Bleeding
- SAS Calibration
- Injector Coding
- Throttle Relearn

More specific functions (up to 100+) can be found under the 'Diagnose > Vehicle Brand > System > Special Function'

menu.

3.5 Additional Smart Features

- **AutoVIN Feature:** Automatically identifies vehicle information, streamlining the diagnostic process.
- **Multi-PID Live Data Graphing:** Displays up to 12 data streams simultaneously in graphic and textual formats for easy analysis.
- **Remote Diagnose:** Facilitates remote assistance and experience sharing among technicians.
- **Massive Online Resources:** Access to operation tips, DTC help, automotive technology handbooks, repair cases, and how-to videos.

Figure 3.3: Key operational features including automatic VIN detection, 12-in-1 live data stream display, remote diagnostic capabilities, and options for recording, replaying, and printing diagnostic reports.

3.6 Vehicle Coverage

The LAUNCH X431 V PRO 4.0 supports over 150 worldwide vehicle brands from 1996-2024, with no IP restrictions. It

also includes FREE V.A.G Guided Functions for VW, AUDI, SKODA, SEAT, and AutoAuth for FCA vehicles.

Figure 3.4: Illustrates the extensive global vehicle coverage of the scan tool, supporting over 150 worldwide brands from 1996 to 2024, with continuous updates and no IP restrictions.

3.7 Extended Module Functions

The device supports various optional extended modules (sold separately) to expand its capabilities:

- ADAS Calibration
- I-TPMS
- X-PROG3 (Immo Programmer)
- VSP500 (Videoscope)
- X431 Wifi Printer
- BST360 Battery Tester

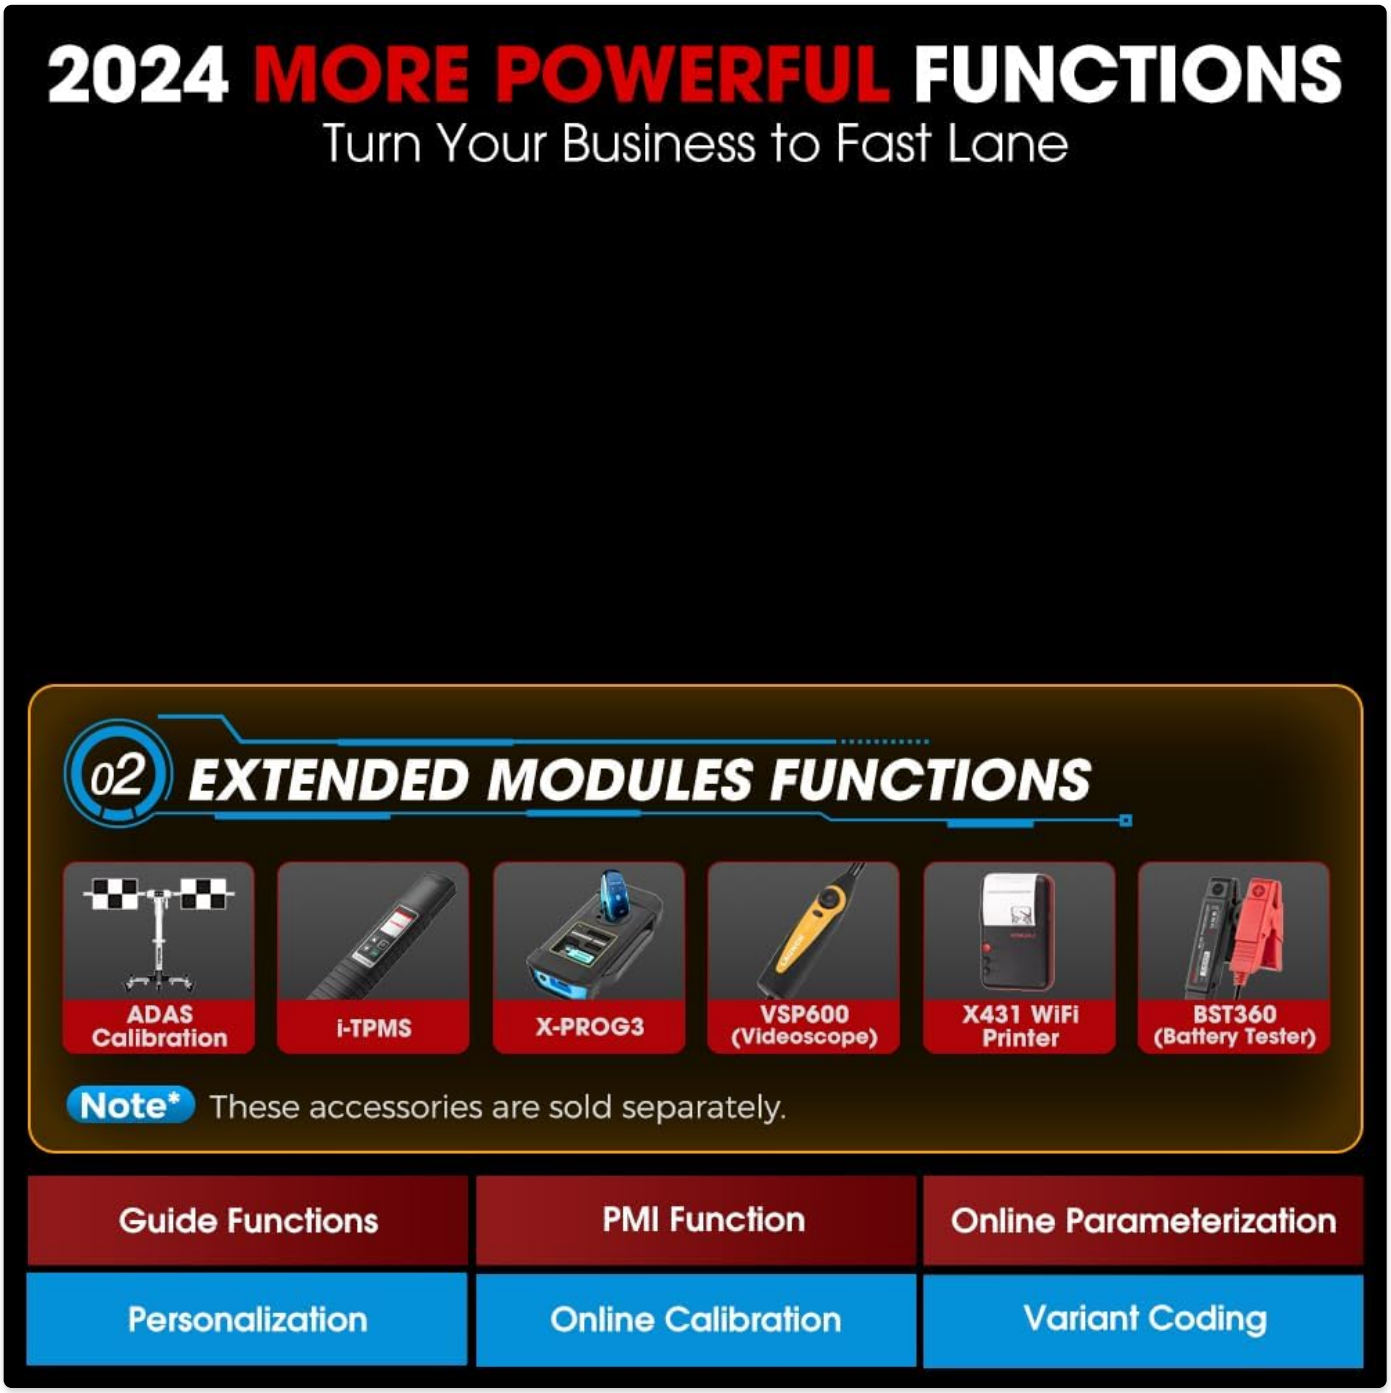

Figure 3.5: Displays the range of extended modules that can be connected to the LAUNCH X431 V PRO 4.0, including ADAS Calibration, I-TPMS, X-PROG3, VSP500 (Videoscope), X431 Wifi Printer, and BST360 Battery Tester, all sold separately.

4. Maintenance

4.1 Software Updates

The device comes with a 2-year free software update period. It is highly recommended to regularly update the software via Wi-Fi to ensure access to the latest vehicle coverage, features, and bug fixes. Updates can be performed with a single click.

4.2 Cleaning and Care

Keep the device clean by wiping it with a soft, dry cloth. Avoid using abrasive cleaners or solvents. Store the device in its protective case when not in use to prevent damage.

5. Troubleshooting

If you encounter issues with your LAUNCH X431 V PRO 4.0, consider the following common solutions:

- **Device not powering on:** Ensure the device is fully charged. If the issue persists, try connecting it to a different power outlet or using a different charging cable.
- **Connectivity issues (Bluetooth/Wi-Fi):** Verify that Bluetooth is enabled on the device and the VCI connector. For Wi-Fi, ensure you are within range of a strong signal and have entered the correct password.
- **Software freezing/crashing:** Restart the device. Ensure the software is up to date. If the problem continues, consider performing a factory reset (note: this will erase all user data, back up important information first).
- **Diagnostic function not working:** Ensure the VCI connector is securely plugged into the vehicle's OBD-II port and properly paired with the tablet. Verify that the vehicle's ignition is on.

For more complex issues or persistent problems, refer to the online resources available on the device or contact customer support.

Common problems and solutions of LAUNCH X431 V Pro scan tool

Issue: Connected LAUNCH TECH USA, but didn't get any support
Solution:
Please connect us via Amazon,OR our Customer Service Team,
Email:cardiagsales@hotmail.com / cardiag-aftersales@hotmail.com
NOTE:
Our products are all original from LAUNCH TECH, which is the headquarter of LAUNCH.
LAUNCH TECH USA is only an oversea branch of Launch Tech in USA. Therefore, they will not offer any after-sale service to customers who bought the product from Amazon, please feel free to contact us anytime if you have any problem in using the device.

Issue: After the product reset, the APP disappeared / Received scanner with no app loaded!
Solution:
Go to LAUNCH official website and download X431 V Pro APP.
Here is the link of downloading LAUNCH X431 V Pro APP Android Download:
https://m.info.x431.com/v.aspx?t=pad&id=36598&lt=3&l
NOTE:
After downloading and install, please use the original account to log in, then go to update the software.
X431 V Pro : Please download "X-431 V Android Download".

Issue: The LAUNCH X431 V Pro system recognizes and the VDGO interface is stuck
Solution:
Please try to first boot the scanner, and then use the original USB cable to charge the device.
Step 1: Press the power button and volume "+" button at the same time. After the Tablet vibration starts, release the power button and volume button to enter the interface "Fast Mood"
Step 2: Press the volume "+" or volume "-" button, select the Recovery mode interface and press the power button to confirm.
Step 3: Select wipe data/factory reset, select yes-->select wipe cache partition-->select "yes"
Step 4: After completion, press the volume "+" or volume "-" key, move to "power off", and click shutdown. Normally press the power button to boot.
Note:
After flash boot/Recovery, enter the boot setting wizard first. It is recommended to skip Wi-Fi and Google account registration during the setting process. In addition, you need to download and install the diagnostic APK again after flash boot/Recovery.

LAUNCH X431 V Reset Service Function:

In addition to amazing & powerful diagnostic function, X-431 V also features various service functions. The most commonly performed service functions contain:

1) Oil Reset Service

This function can be performed in the following cases:

a). If the service lamp is on, you must provide service for the car. After service you need to reset the driving mileage or driving time so that the service lamp turns off and the system enables the new service cycle.

b). After changing engine oil or electric appliances that monitor oil life, you need to reset the service lamp.

2) Steering Angle Calibration

a). To reset the steering angle, first find the relative zero point position for the car to drive in straight line. Taking this position as reference, the ECU can calculate the accurate angle for left and right steering.

b). After replacing the steering angle position sensor, replacing steering mechanical parts (such as steering gearbox, steering column, end tie rod, steering knuckle), performing four wheel alignment, or recovering car body,you must reset the steering angle.

3) Electronic Parking Brake Reset

a). If the brake pad wears the brake pad sense line, the brake pad sense linesends a signal sense line to the on-board computer to replace the brake pad.After replacing the brake pad, you must reset the brake pad. Otherwise, the car alarms.

b). Reset must be performed in the following cases:

The brake pad and brake pad wear sensor are replaced.

The brake caliper assembly is on.

The brake pad sensor circuit is short, which is recovered.

The servo motor is replaced.

4) ABS Bleeding

This function allows you to perform various bi-directional tests to check the operating conditions of Anti-lock Braking System (ABS).

a). If there is air in the brake pipe or air, the ABS bleeding function must be performed to bleed the brake system to restore ABS brake sensitivity.

b). If the ABS computer, ABS pump, brake master cylinder, brake cylinder, brake line, or brake fluid is replaced, the ABS bleeding function must be performed to bleed the ABS.

5) Electronic Throttle Position Reset / Learn

This function enables you to initialize the throttle actuator,s so that the "learned" values stored on ECU are returned to the default state. Doing so can accurately regulate throttle (or idle engine) operations to control the amount of air intake. Throttle matching must be performed in the following cases:

a) The throttle body is removed, or the ECU or battery is disconnected, clearing learning features.

b) The ECU is disconnected from power and the ECU memory is lost.

c) The throttle assembly is replaced.

d) The intake pipe is replaced or removed, which affects idle speed control by ECU and throttle body.

e) The throttle is cleaned. Although the idle throttle potentiometer features remain unchanged, with the same throttle opening, the air inflow has changed and idle speed control features have changed.

6) Battery Register/Battery Maintenance

This function enables you to perform a resetting operation on the monitoring unit of vehicle battery, in which the original low battery fault information will be cleared and battery matching will be done.

Battery matching must be performed in the following cases:

a) Main battery is replaced. Battery matching must be performed to clear original low battery information and prevent the related control module from detecting false information. If the related control module detects false information, it will invalidate some electric auxiliary functions, such as automatic start & stop function, sunroof without one-key trigger function,power window without automatic function.

b) Battery monitoring sensor. Battery matching is performed to re-match the control module and matching sensor to adjust battery power usage mode accurately, which can avoid an error message displaying on the instrument panel.

7) Diesel Particulate Filter (DPF) Regeneration

DPF regeneration is used to clear PM (Particulate Matter) from the DPF filter through continuous combustion oxidation mode (such as: high temperature heating combustion, fuel additive or catalyst reduce PM ignition combustion) to stabilize the filter performance.

DPF regeneration may be performed in the following cases:

a) The exhaust back pressure sensor is replaced.

b) The PM trap is removed or replaced.

X431 V comes with 11 reset service functions

1) **Oil Reset Service**:Allows you to perform reset maintenance mileage and data intervals for a new calculation of Engine Oil Life system once changed the oil.

2) **Steering Angle Calibration**:Help clear he fault steering angle sensor memories and plays an important role in the steering angle sensor calibration.

3) **Electronic Parking Brake Reset(EPB)**:It is important in the maintenance of electronic braking system's safety and efficiency when replace brake pad or motor

4) **Battery Register/Battery Maintenance(BRM)**:allows the scan tool to evaluate the battery charge state, monitor the close-circuit current, register the new battery replacement, and activate the rest state of the vehicle battery system

5) **ABS Bleeding**:The auto bleed procedure is used on BOSH 5.3 equipped vehicles.This procedure uses a scan tool to cycle the system solenoid valves and run the pump in order to purge the air from the secondary circuit.

6) **Electronic Throttle Position Reset/Learn(ETP)**:vehicle's throttle position system sensor connected to the butterfly spindle and is primarily used to monitor the throttle position within an inner combustion engine. Due to its location, the throttle position sensor is able to effectively observe where the throttle butterfly valve is positioned.

7) **Diesel Particulate Filter (DPF) Regeneration**:Specially works for Diesel Particulate Filter system with DPF regeneration,DPF component replacement teach-in and DPF teach-in after replacing the engine control unit

8) **Tire Pressure Monitor System Reset(TPM)**:Makes tpms senser in displaying sensor IDs from the vehiclersquos ECU, inputting TPMS sensor replacement IDs and activate tpms sensors.

9) **Gear Learning**:The scan tool monitors certain Camshaft position sensors signals to determine if all conditions are met to continue with the procedure for Engine running

10) **Immobilizer Matching(IMMO)**:The unique function is mainly used to disable the lost vehicle keys and program a new replacement key fob.

11) **Fuel Injector Coding**:Diesel injector code need programming ID and parameters to the ECU for accurate communication and injection control system
