## Amazon Echo Wall Clock

# Amazon Echo Wall Clock User Manual

Model: Echo Wall Clock

Brand: Amazon

## INTRODUCTION

The Amazon Echo Wall Clock is a companion device designed to work seamlessly with your compatible Amazon Echo device. It provides an easy-to-read analog time display and a digital 60-LED display for visualizing timers and alarms set through Alexa.

## SETUP

### 1. Unboxing and Initial Setup

Upon opening the package, you will find the Echo Wall Clock, four AA batteries, and mounting hardware. Before mounting, ensure batteries are installed.

## 2. Battery Installation

The Echo Wall Clock requires four AA batteries for operation. These are typically included in the box. To install, open the battery compartment on the back of the clock and insert the batteries, ensuring correct polarity.

### 3. Pairing with a Compatible Echo Device

The Echo Wall Clock connects to your Echo device via Bluetooth. Ensure your Echo device is powered on and within 30 feet of the clock. To initiate pairing, simply say: **"Alexa, set up my Echo Wall Clock."** Follow the voice prompts from your Echo device. The status light on the clock face will pulse orange during pairing and turn blue once successfully paired.

### 4. Mounting

Use the included mounting hardware to hang the clock on a wall. Choose a location within Bluetooth range of your paired Echo device.

**Caution: Do not manually adjust the clock hands. This can damage the internal mechanism and prevent proper synchronization.**

## OPERATING THE ECHO WALL CLOCK

## 1. Time Display

The Echo Wall Clock features a classic analog display with hour and minute hands, providing a clear view of the current time.

## 2. Timer Visualization

The clock's outer edge features a 60-LED digital display. When you set a timer using your Echo device, the LEDs will illuminate and count down the remaining time, offering a visual representation of your timers at a glance.

### 3. Setting Timers and Alarms

All timers and alarms are set through your paired Echo device using voice commands. For example, say: **"Alexa, set a 12-minute timer."** The clock will then visually count down the timer.

## 4. Multiple Timers

The Echo Wall Clock can display multiple timers simultaneously. Each active timer will be represented by a segment of the LED ring, allowing you to track several events at once.

## 5. Alarm Notifications

When an alarm or timer concludes, the sound will come from your paired Echo device, and the LEDs on the Echo Wall Clock will flash to provide a visual alert.

## MAINTENANCE

### 1. Battery Replacement

The Echo Wall Clock is powered by four AA batteries. When the batteries are low, the clock's performance may be affected. Replace all four batteries with new ones to ensure optimal functionality.

## 2. Cleaning

To clean your Echo Wall Clock, gently wipe the surface with a soft, dry, lint-free cloth. Avoid using abrasive cleaners or solvents that could damage the finish.

## 3. Important Note

**To prevent damage, never attempt to manually move or adjust the clock hands. All time adjustments and synchronizations are handled automatically via your paired Echo device.**

## TROUBLESHOOTING

- **Clock Not Pairing:** Ensure your Echo device is powered on and within Bluetooth range (approximately 30 feet). Try restarting both your Echo device and the Echo Wall Clock (by removing and reinserting batteries). Then, re-initiate the pairing process with the voice command: "Alexa, set up my Echo Wall Clock."
- **Incorrect Time Display:** The clock automatically syncs its time with your paired Echo device. If the time is incorrect, verify that the clock is successfully paired and within range. If issues persist, try re-pairing the device.
- **Short Battery Life:** Frequent use of the LED timer display can consume battery power more quickly. Consider using high-quality alkaline batteries. If battery life remains unusually short, ensure there are no constant disconnections/reconnections, which can drain power.
- **Hands Not Moving Correctly:** As a reminder, avoid physically manipulating the clock hands. If the hands are not moving or are stuck, try restarting the clock by removing and reinserting the batteries. If the problem continues after re-pairing, the device may be faulty.
- **No Sound for Alarms/Timers:** The Echo Wall Clock does not have its own speaker. All audio alerts for timers and alarms will come from your paired Echo device. Ensure your Echo device's volume is audible.
