Problem	Possible Cause	Solution
Oven does not heat up.	No power supply; incorrect function/temperature setting.	Check power connection and circuit breaker. Verify function and temperature settings.
Digital display is off or flashing.	Power outage; oven in standby mode.	Reset the time. If persistent, check power supply.
Uneven cooking results.	Incorrect rack position; overloaded oven; door not fully closed.	Use recommended rack positions. Avoid overcrowding. Ensure door is sealed.
