1. Product Overview

The ZINUS Florence Metal Platform Bed Frame is designed to provide sturdy and durable mattress support without the need for a box spring. Its classic design with a spindle headboard and curved silhouette complements various interior styles, from industrial to traditional. This bed frame offers practical features such as ample under-bed storage space and is engineered for easy assembly.

- **Sturdy Steel Construction:** Engineered for long-lasting durability and reliable mattress support.
- **No Box Spring Needed:** The slatted metal foundation is designed to support memory foam, spring, and hybrid mattresses directly.
- **Dependable & Durable:** Strong steel frame and slats are designed to prevent sagging and extend mattress life.
- **Under-bed Storage:** Features 10 inches of clearance space, ideal for storing various items.

2. Setup and Assembly

The ZINUS Florence Bed Frame is designed for straightforward and easy assembly. All necessary components and tools are included in the packaging. It is recommended to assemble the bed frame in the room where it will be used.

2.1 Unpacking and Component Identification

Carefully unpack all components from the box. Verify that all parts are present and undamaged by comparing them with the parts list provided in the included installation manual. Components are typically labeled for easy identification.

2.2 Assembly Steps

Follow the step-by-step instructions in the provided installation manual. Key steps typically involve:

1. Attaching the side rails to the headboard and footboard.
2. Securing the center support beam (if applicable).
3. Inserting and securing the metal slats into the designated slots on the side rails. Many slats feature adhesive strips to prevent mattress movement.

3. Operating Guidelines

The ZINUS Florence Bed Frame is designed for optimal performance with various mattress types and provides practical under-bed storage.

3.1 Mattress Compatibility

This platform bed frame is compatible with memory foam, spring, and hybrid mattresses. A box spring is not required, as the integrated metal slats provide sufficient support.

3.2 Weight Capacity

The bed frame has specific weight limits to ensure safety and structural integrity:

- **Twin Size:** Supports up to 350 lbs (158 kg).
- **All Other Sizes (Full, Queen, King):** Support up to 700 lbs (317 kg).

Do not exceed these weight limits, as doing so may compromise the frame's stability and void the warranty.

3.3 Under-bed Clearance

The design provides approximately 10 inches (25.4 cm) of clearance space beneath the bed frame. This space can be utilized for convenient storage of various items, helping to maximize room organization.

4. Maintenance

Proper care and maintenance will help preserve the appearance and longevity of your ZINUS Florence Bed Frame.

- **Cleaning:** Wipe the metal frame with a soft, damp cloth. Avoid using abrasive cleaners, harsh chemicals, or solvents, as these can damage the painted finish.
- **Regular Inspection:** Periodically check all bolts and connections to ensure they remain tight. Re-tighten any loose fasteners to maintain stability and prevent squeaking.
- **Slat Care:** Ensure that the mattress is evenly distributed over the slats. If your mattress is particularly heavy or prone to impressions, consider adding a thin plywood board between the mattress and the metal slats for additional support, as suggested by some users.
- **Movement:** When moving the bed frame, lift it rather than dragging it to prevent damage to the frame or your flooring.

5. Troubleshooting

This section addresses common issues you might encounter with your bed frame.

Problem	Possible Cause	Solution
Squeaking Noises	Loose bolts or connections.	Inspect all assembly points and tighten any loose bolts using the provided tools. Ensure all parts are correctly aligned.
Mattress Sliding	Insufficient friction between mattress and slats.	The bed frame's slats include adhesive strips to help prevent mattress movement. Ensure these strips are uncovered and making contact with the mattress. If sliding persists, consider using a non-slip mattress pad.
Frame Instability / Wobbling	Improper assembly or uneven floor surface.	Review the assembly instructions to ensure all parts are correctly installed and tightened. If the floor is uneven, place shims under the bed frame legs to level it.

Problem	Possible Cause	Solution
Mattress Impressions / Sagging (on slats)	Heavy mattress or specific mattress type requiring more solid support.	While the metal slats provide ample support, for certain heavy mattresses or personal preference, placing a thin sheet of plywood or a bunkie board between the mattress and the slats can provide a more solid surface and prevent impressions.
