3.1 Unpacking and Inspection

Carefully remove the microwave oven from its packaging. Inspect the oven for any damage, such as dents on the casing or door, or a broken turntable. If any damage is found, do not operate the oven and contact your retailer.

3.2 Placement

Place the microwave oven on a flat, stable surface that can support its weight. Ensure there is adequate ventilation around the oven:

- Allow at least 10 cm (4 inches) of space at the rear.
- Allow at least 20 cm (8 inches) of space on the top.
- Allow at least 5 cm (2 inches) of space on the sides.

Do not block any ventilation openings. Do not place the oven near heat sources or in areas with high humidity.

3.3 Power Connection

Plug the power cord into a grounded 230V, 50Hz electrical outlet. Do not use extension cords or adapters.

3.4 Initial Setup (Setting the Clock)

Upon first power-up or after a power outage, the display will show '0:00'.

1. Press the 'Clock' button (if available, or refer to specific model controls).
2. Use the number pads or '+' / '-' buttons to set the current time.
3. Press the 'Clock' or 'Start' button to confirm.

4. Operating Instructions

4.1 Control Panel Overview

The control panel typically includes a digital display, number pads, power level selection, cooking function buttons (e.g., Defrost, Reheat), and Start/Stop buttons. Refer to the icons on your specific model for exact functions.

4.2 Basic Microwave Cooking

1. Place food in a microwave-safe container on the glass turntable. Close the door securely.
2. Press the 'Microwave' or 'Power Level' button to select the desired power (e.g., 100% for full power).
3. Use the number pads or '+' / '-' buttons to set the cooking time.
4. Press the 'Start' button to begin cooking.

4.3 Defrosting

The oven offers various defrosting options:

- **Auto Defrost:** Select the 'Defrost' button, then choose the food type (e.g., meat, poultry, fish) and enter the weight. The oven will automatically calculate the defrosting time and power level.
- **Manual Defrost:** Place the frozen food in the oven. Select a lower power level (e.g., 30-50%) and set the desired defrosting time manually. Turn food over periodically for even defrosting.

4.4 Reheating

For reheating, place food in a microwave-safe dish. Use the 'Reheat' function (if available) or set a medium-high power level (e.g., 70-80%) for a short duration, checking food temperature frequently.

4.5 Stopping/Pausing Operation

To pause cooking, open the door or press the 'Stop/Clear' button once. To cancel cooking completely, press the 'Stop/Clear' button twice.

5. Care and Maintenance

Regular cleaning and proper care will ensure the longevity and optimal performance of your microwave oven.

5.1 Cleaning the Interior

The ceramic interior is designed for easy cleaning.

- Wipe the interior cavity with a damp cloth after each use to prevent food splatters from drying.
- For stubborn stains, place a bowl of water with lemon slices inside and microwave for 2-3 minutes. The steam will loosen food particles, making them easier to wipe away.
- Do not use abrasive cleaners, steel wool, or harsh chemicals, as these can damage the ceramic coating.

5.2 Cleaning the Exterior

Wipe the exterior surfaces with a soft, damp cloth. For the control panel, use a slightly damp cloth and avoid excessive moisture. Do not spray cleaners directly onto the control panel.

5.3 Cleaning the Turntable

The glass turntable and roller ring can be removed for cleaning. Wash them in warm, soapy water or in the dishwasher. Ensure they are completely dry before placing them back in the oven.

6. Troubleshooting Guide

Before contacting service, review the following common issues and solutions:
