Assembly Instructions

Assembly is designed to be straightforward. It is recommended to have two people for easier assembly, though it can be done by one person.

1. **Unpack and Identify Parts:** Carefully remove all components from the packaging. Lay them out on a clean, soft surface to prevent scratching. Refer to the Components List to ensure all parts are present.
2. **Unfold Main Frame Sections (A):** Gently unfold the two main frame sections. Be mindful of pinch points.
3. **Attach Legs (C):** Secure each leg to the designated points on the main frame sections using the provided bolts (E) and hex keys (F). Ensure all legs are firmly attached and oriented correctly.
4. **Connect Center Support Bar (B):** Align the center support bar with the corresponding connectors on the main frame sections. Insert bolts (E) and tighten securely with the hex keys (F). This bar provides additional central stability.
5. **Tighten All Connections:** Once all parts are loosely assembled, go back and fully tighten all bolts. Do not overtighten, but ensure they are snug to prevent wobbling.
6. **Apply Non-slip Tape (G):** For enhanced mattress stability, apply the included non-slip double-sided adhesive tape to the top of the steel slats where the mattress will rest. This helps prevent the mattress from shifting.
7. **Final Check:** Gently shake the assembled frame to ensure it is stable and all connections are secure.

Maintenance

To ensure the longevity and performance of your bed frame, follow these simple maintenance guidelines:

- **Regular Cleaning:** Wipe down the metal frame with a soft, damp cloth to remove dust and dirt. Avoid abrasive cleaners or harsh chemicals that could damage the finish.
- **Check Connections:** Periodically inspect all bolts and connections to ensure they remain tight. Retighten if necessary to maintain stability and prevent noise.

- **Avoid Excessive Moisture:** While the frame is powder-coated for durability, prolonged exposure to moisture should be avoided to prevent rust.
- **Weight Distribution:** Distribute weight evenly across the bed frame to prevent undue stress on specific areas.

Troubleshooting

If you encounter any issues with your bed frame, refer to the following common solutions:

- **Frame is Noisy/Creaking:**
  - Ensure all bolts are securely tightened. Loose connections are a common cause of noise.
  - Check if the noise is coming from the mattress rubbing against the frame. Adjust the mattress position.
  - Verify that the bed frame is on a level surface. Uneven surfaces can cause stress and noise.
- **Mattress is Slipping:**
  - Ensure the non-slip double-sided adhesive tape is properly applied to the steel slats. If it has lost its stickiness, replace it with new non-slip tape or rubber grippers.
  - Confirm that the mattress size is compatible with the bed frame (Queen mattress for Queen frame).
- **Frame Feels Unstable/Wobbly:**
  - Re-tighten all assembly bolts.
  - Ensure all legs are making firm contact with the floor. Adjust the frame's position if necessary.
  - Verify that the center support bar is correctly installed and secured.
