MAINTENANCE

Proper maintenance can extend the life of your worm gear and the appliance it serves.

- **Cleaning:** Periodically inspect the gear for any debris or buildup. Clean with a soft cloth and a mild, non-abrasive cleaner if necessary. Avoid harsh chemicals that could damage the stainless steel or surrounding components.
- **Lubrication:** If the appliance's service manual specifies lubrication for the worm gear or associated moving parts, use the recommended lubricant and follow the application instructions.
- **Inspection:** Regularly inspect the gear for signs of wear, such as chipped teeth, excessive play, or unusual discoloration. Replace the gear if significant wear is observed to prevent further damage to the appliance.

TROUBLESHOOTING

If the appliance is not functioning correctly after gear replacement, consider the following common issues:

- **Appliance Not Operating:** Ensure the gear is correctly seated and all associated components are properly installed. Verify that the appliance is receiving power.
- **Unusual Noises:** Grinding or clicking noises may indicate improper installation, misalignment, or interference with other parts. Re-check the installation steps.
