SETUP AND ASSEMBLY

Your Schwinn Mikko bike arrives partially assembled. Final assembly is required before use. If you are not confident in your mechanical abilities, it is recommended to seek assistance from a qualified bicycle mechanic.

Required Tools (Not Included):

- Adjustable wrench or set of metric wrenches
- Hex key set
- Phillips head screwdriver
- Tire pump with pressure gauge

Assembly Steps:

1. **Unpacking:** Carefully remove all components from the packaging. Inspect for any shipping damage.
2. **Handlebar Installation:** Insert the handlebar stem into the fork steerer tube. Align the handlebars straight with

the front wheel and tighten the stem bolt securely.

3. **Front Wheel Attachment:** Install the front wheel into the fork dropouts. Ensure the wheel is centered and the quick-release or axle nuts are tightened firmly.
4. **Pedal Installation:** Identify the left (L) and right (R) pedals. The left pedal threads counter-clockwise, and the right pedal threads clockwise. Apply a small amount of grease to the threads and tighten securely with a wrench.
5. **Seat Post and Saddle:** Insert the seat post into the frame's seat tube. Adjust the saddle height to allow a slight bend in your knee when the pedal is at its lowest point. Tighten the seat post clamp.
6. **Fender Adjustment:** Ensure the front and rear fenders are properly aligned over the wheels and do not rub. Adjust mounting bolts as necessary.
7. **Tire Inflation:** Inflate tires to the recommended pressure indicated on the tire sidewall.
8. **Final Safety Check:** Before your first ride, double-check all bolts, nuts, and quick releases for tightness. Test the brakes and steering.
