# VOUNOT Metal Outdoor Log Rack with Waterproof Cover

Model: 2440961327204

## PRODUCT OVERVIEW

The VOUNOT Metal Outdoor Log Rack is designed to provide a robust and efficient solution for storing firewood outdoors. Its sturdy metal construction ensures durability, while the included waterproof cover protects your logs from the elements, keeping them dry and ready for use. The elevated design prevents direct contact with damp ground, promoting better air circulation and preventing moisture absorption.

## PACKAGE CONTENTS

Before assembly, ensure all components are present. The package typically includes:

- Metal frame components (various tubes and connecting bars)
- Fasteners (bolts, nuts, washers)
- Assembly tools (wrenches)
- Waterproof cover

*Image: All parts of the log rack laid out, including the metal tubes, fasteners, and tools, ready for assembly.*

## ASSEMBLY INSTRUCTIONS

---

Assembly of the VOUNOT Metal Outdoor Log Rack is straightforward and typically takes about 10 minutes. Follow these steps:

- 1. Prepare the Base:** Lay out the base frame components on a flat, stable surface. Connect the horizontal base bars to the vertical support legs using the provided bolts and nuts. Ensure all connections are finger-tight at this stage.
- 2. Assemble the Side Frames:** Attach the curved upper sections to the vertical support legs. These form the side walls of the log rack. Secure them with bolts and nuts, again, only finger-tight for now.
- 3. Connect the Sections:** If your model consists of multiple sections (e.g., 2M model), connect them using the central connecting bars and fasteners. This creates the full length of the log rack.
- 4. Tighten All Fasteners:** Once the entire frame is assembled, use the provided wrenches to securely tighten all bolts and nuts. Ensure the structure is stable and rigid.
- 5. Apply the Waterproof Cover:** Drape the waterproof cover over the assembled log rack. The cover is designed to fit snugly and protect the firewood from rain and snow. Secure the cover using its integrated fasteners (e.g., Velcro straps or eyelets) to the frame.

## OPERATING INSTRUCTIONS

Using your VOUNOT Metal Outdoor Log Rack is simple:

- **Placement:** Position the log rack on a flat, stable surface outdoors, ideally in a location with good air circulation.
- **Stacking Firewood:** Neatly stack your firewood within the rack. Ensure the logs are cut to appropriate lengths to fit securely without protruding excessively. Stacking logs in a crisscross pattern at the ends can enhance stability.
- **Using the Cover:** After stacking, place the waterproof cover over the firewood. The cover is designed to protect the top and sides of the wood from rain and snow while allowing air to circulate from the bottom and sides to prevent moisture buildup. Secure the cover using the integrated Velcro straps or eyelets to prevent it from being blown away by wind.
- **Accessing Firewood:** The cover typically features openings or adjustable sides (e.g., Velcro) to allow easy access to your firewood without removing the entire cover.

## MAINTENANCE

Regular maintenance will extend the life of your log rack:

- **Cleaning the Frame:** Periodically wipe down the metal frame with a damp cloth to remove dirt and debris. Inspect for any signs of rust or damage to the powder coating.
- **Cover Care:** Clean the waterproof cover with mild soap and water. Ensure it is completely dry before folding and storing, especially during off-season, to prevent mold or mildew. Check for tears or damage and repair as needed to maintain its waterproof integrity.
- **Fastener Check:** Annually, or as needed, check all bolts and nuts to ensure they remain tight. Re-tighten any loose fasteners to maintain the rack's stability.
- **Ground Clearance:** Ensure the 18 cm ground clearance is maintained to allow proper air flow and prevent moisture from the ground affecting the logs. Clear any debris that might accumulate underneath.

## TROUBLESHOOTING

---

Here are solutions to common issues:

- **Issue: Rack feels unstable after assembly.**

**Solution:** Ensure all bolts and nuts are fully tightened using the provided wrenches. Check that the rack is placed on a level surface.

- **Issue: Water accumulates on top of the cover.**

**Solution:** This can happen if the cover sags. Ensure the cover is pulled taut and secured properly. If necessary, adjust the wood stacking to create a slight peak in the center to encourage water runoff.

- **Issue: Firewood is still damp despite using the cover.**

**Solution:** Verify that the cover is correctly positioned to protect from direct rain/snow while allowing air circulation. Ensure the rack is elevated 18 cm from the ground. Consider placing the rack in a location with better airflow.

- **Issue: Cover tears or rips.**

**Solution:** Small tears can be repaired with waterproof repair tape. For significant damage, a replacement cover may be necessary.

## SPECIFICATIONS

---

Feature	Detail
Product Dimensions (L x W x H)	200 x 36 x 116 cm (78.7 x 14.2 x 45.7 inches)
Product Weight	5.1 kg (11.2 lbs)
Material	Metal (Powder-coated)

Color	Black
Special Feature	Durable, Elevated Design, Waterproof Cover
Assembly Required	Yes
Model Number	2440961327204
