3. Setup

3.1 Unpacking

1. Carefully remove all packaging materials, including the foam base and any adhesive tape.
2. Inspect the refrigerator for any shipping damage. Report any damage to your retailer immediately.

3. Clean the interior and exterior of the refrigerator with a soft cloth and mild detergent before use.

3.2 Placement

- Place the refrigerator on a flat, stable surface strong enough to support the unit when fully loaded.
- Ensure adequate air circulation around the unit. Maintain a minimum of 6 inches (15 cm) of space from the back and sides to allow for proper ventilation and cooling efficiency. Avoid placing it in an enclosed cabinet without proper airflow.
- Avoid direct sunlight or heat sources (e.g., stoves, radiators). High ambient temperatures can affect cooling performance and increase energy consumption.
- Do not place the refrigerator in areas with high humidity.

3.3 Leveling

The refrigerator must be level for proper operation. Adjust the leveling legs at the bottom of the unit by turning them clockwise to raise or counter-clockwise to lower until the refrigerator is stable and level.

3.4 Electrical Connection

- Ensure the voltage indicated on the rating label matches your household power supply.
- Plug the refrigerator into a dedicated, grounded electrical outlet. Do not use extension cords or adapter plugs.
- Allow the refrigerator to stand upright for at least 2-4 hours before plugging it in to allow refrigerants to settle.

4. Operating Instructions

4.1 Temperature Control

The temperature inside the refrigerator is controlled by a thermostat knob located inside the unit, typically near the freezer compartment. Turn the knob to adjust the cooling level:

- **"0" (OFF):** Turns the cooling system off.
- **"1" (MIN):** Least cold setting.
- **"4" (MAX):** Coldest setting.

For normal operation, a setting between "2" and "3" is usually sufficient. Adjust as needed based on ambient temperature and desired cooling level. Allow several hours for the temperature to stabilize after adjustment.

4.2 Loading the Refrigerator

- Arrange items to allow for proper air circulation. Do not overfill the unit.
- Utilize the adjustable glass shelves for different heights of items.
- Use the 2L door basket for large bottles and the built-in can dispenser for standard beverage cans.
- The internal freezer compartment is suitable for small frozen items or an ice cube tray.

4.3 Bottle Opener

The integrated bottle opener on the side of the unit provides quick and easy access to your bottled beverages. Simply place the bottle cap under the opener and leverage it to remove the cap.

5. Maintenance

5.1 Cleaning

- Always unplug the refrigerator before cleaning.
- Clean the interior with a soft cloth and a solution of mild detergent and warm water. Avoid abrasive cleaners or harsh chemicals.
- Wipe down the exterior with a soft, damp cloth. For the chrome accents, use a non-abrasive cleaner designed for polished surfaces.
- Regularly clean the condenser coils at the back of the unit (if accessible) to ensure efficient operation.

5.2 Defrosting

The freezer compartment will accumulate frost over time. Defrost the unit when the frost layer is about 1/4 inch (6 mm) thick.

1. Unplug the refrigerator.
2. Remove all food items from the freezer and refrigerator compartments. Store them in a cooler to keep them cold.
3. Leave the door open to allow frost to melt naturally. You can place towels at the bottom to absorb water. Do not use sharp objects or heating devices to speed up defrosting, as this can damage the unit.
4. Once defrosted, clean and dry the interior thoroughly.
5. Plug the refrigerator back in and allow it to cool down before returning food items.

6. Troubleshooting

Before contacting customer service, please check the following common issues and solutions:

Problem	Possible Cause	Solution
Refrigerator does not operate.	Not plugged in; circuit breaker tripped; temperature control set to "0" (OFF).	Ensure plug is secure; reset circuit breaker; turn temperature control to a higher setting.
Temperature is not cold enough.	Door opened too frequently; warm food placed inside; poor air circulation; unit in direct sunlight/heat source; thermostat set too low.	Minimize door openings; allow hot food to cool before placing inside; ensure proper clearance around unit; relocate unit; adjust thermostat to a colder setting.
Excessive frost buildup.	Door not sealed properly; high humidity; frequent door openings.	Check door gasket for proper seal; avoid placing in humid areas; minimize door openings. Defrost as needed.
Unit is noisy.	Unit not level; vibrating against wall/cabinet; normal compressor operation.	Adjust leveling legs; move unit away from contact surfaces; some noise from compressor is normal.
