5. Operating Instructions

5.1 Charging Process

- Once batteries are inserted, the individual LCD screens for each channel (CH1 and CH2) will display a 4-level bar indicator, showing the current charge status of each battery.
- The charging current is 700mA when one battery is inserted and 500mA per slot when both slots are occupied.
- The charger automatically switches to trickle charge mode once the batteries are fully charged to prevent overcharging.

5.2 LCD Display Indicators

Each LCD screen provides a visual representation of the battery's charge level:

- **Empty bars:** Battery is discharged.
- **Partially filled bars:** Battery is charging, indicating the current charge level.
- **All bars filled:** Battery is fully charged.

8. TROUBLESHOOTING

* **Charger not turning on:** Ensure the USB cable is securely connected to both the charger and a working power source. Try a different USB cable or power source.
* **Battery not charging:** Verify that the battery is correctly inserted into the slot and its contacts are clean. Ensure the battery is compatible with the charger. If the battery is severely depleted, it may take a few minutes for the charger to register it.
* **Slow charging:** Ensure your USB power source provides sufficient current (at least 2100mA). Using a lower-power USB port may result in slower charging times.
* **LCD display not showing:** If the charger is powered but the LCD is blank, try re-inserting the battery or connecting to a different power source.

9. MAINTENANCE

* **Cleaning:** Use a soft, dry cloth to clean the charger's exterior. Do not use liquid cleaners or solvents.
* **Storage:** Store the charger in a cool, dry place away from direct sunlight and extreme temperatures when not in use.
* **Battery Contacts:** Periodically check the battery contacts on both the charger and your batteries for dirt or corrosion. Clean gently with a cotton swab if necessary.
