Troubleshooting

If you experience issues with your UBay RM-ADU007 remote control, refer to the following common solutions:

Problem	Possible Cause / Solution
Remote is not responding.	◦ **Batteries:** Check if batteries are inserted correctly (+/- orientation). Replace with fresh AAA batteries. ◦ **Line of Sight:** Ensure there is a clear line of sight between the remote's infrared emitter and the receiver on your Sony AV system. Obstructions can block the signal. ◦ **Distance:** You may be too far from the device. Move closer to the Sony AV system. ◦ **Interference:** Strong light sources (e.g., direct sunlight, fluorescent lights) can interfere with infrared signals. Try operating the remote in a different lighting condition.

Problem	Possible Cause / Solution
Only some buttons work.	◦ **Battery Power:** Low battery power can sometimes cause inconsistent button responses. Replace batteries. ◦ **Stuck Buttons:** Check if any buttons are physically stuck or jammed. Gently press and release them. ◦ **Compatibility:** While this remote is broadly compatible, some specific functions might not be supported by all Sony models. Refer to your Sony system's original manual for specific remote functions.
Remote works intermittently.	◦ **Weak Batteries:** This is a common symptom of weak batteries. Replace them. ◦ **Signal Obstruction:** Ensure no objects are intermittently blocking the signal path.

If the problem persists after trying these solutions, the remote control may be faulty. Contact the seller or manufacturer for further assistance.
