4. TROUBLESHOOTING

If you encounter issues with your Gotega External DVD Drive, please refer to the following common troubleshooting steps:

Problem	Possible Cause	Solution
Drive not detected by computer.	Loose USB connection, incompatible USB port, driver issue.	Ensure the USB cable is securely connected to a working USB 3.0 or 2.0 port. Try a different USB port. Restart your computer. For Windows, check Device Manager for the drive.
Disc not reading or writing.	Dirty/scratched disc, incorrect disc type, incompatible software.	Clean the disc with a soft cloth. Ensure the disc type (CD/DVD) is supported. Verify your burning/playback software is compatible and up-to-date. Note: Blu-ray discs are not supported.
Slow data transfer speed.	Connected to USB 2.0 port, system resource limitations.	For optimal speed, connect to a USB 3.0 port. Close unnecessary applications to free up system resources.
Disc stuck in drive.	Eject button malfunction, power issue.	Ensure the drive is powered (green light on). Use the emergency eject hole (small pinhole next to the eject button) with a straightened paperclip to manually open the tray.
