MAINTENANCE

Proper maintenance ensures the longevity and optimal performance of your XP Deus II Metal Detector.

- Cleaning:** After each use, especially in wet or sandy conditions, wipe down all components with a damp cloth. Ensure the charging ports are clean and dry before charging.
- Storage:** Store the detector in a cool, dry place away from direct sunlight and extreme temperatures. Disassemble the shaft if storing for extended periods to prevent stress on components.
- Battery Care:** Charge batteries regularly, even during periods of non-use, to maintain battery health. Avoid fully discharging the batteries frequently.

TROUBLESHOOTING

If you encounter issues with your XP Deus II, refer to the following common troubleshooting tips:

- No Power:** Ensure batteries are fully charged and correctly inserted. Check all connections for the remote control, WS6 puck, and coil.
- No Signal/False Signals:** Perform a ground balance in your current search area. Reduce sensitivity settings if experiencing excessive false signals. Check for electromagnetic interference from power lines or other electronic devices.
- Coil Not Connecting:** Ensure the coil is properly attached and selected in the menu. Re-pair the coil with the control unit if necessary.
- Water Leakage:** If using underwater, ensure all seals and caps are securely fastened. If a leak occurs, immediately power off the device and contact support.
