- **Short Spool of Thread:** Where the thread is initially loaded.
- **Long Spool of Thread:** Can be used with a larger coil of thread by inserting it into the provided rod.
- **Threading Device:** Tool used to assist in threading the needle.
- **Wire Clamping Adjusting Wheel:** Adjusts the tension of the thread.
- **Wire Clamping Sheet:** Fixes the position of the thread. Ensure it is not twisted.
- **Needle Head Screw:** Adjusts the needle position and can be used to change the needle.
- **Cloth Pressing Plate:** Holds the fabric in place during sewing to prevent deviation and skipped stitches.

SETUP

Threading the Machine

Follow these steps to properly thread your sewing machine:

1. **Install the sewing thread:** Place the thread spool onto the designated pin.
2. **Go through the dot:** Guide the thread through the first guide point.
3. **Through a wire clamping sheet:** Pass the thread through the wire clamping sheet, ensuring it is not twisted.
4. **Pass through the hook below:** Guide the thread through the hook located below the clamping sheet.
5. **Use a threading device to thread the needle hole:** Insert the needle threader through the eye of the needle, loop the thread through the threader, and pull it back through the needle eye.
6. **Thread the sewing thread through the threading machine:** Ensure the thread is properly seated in all guides leading to the needle.
7. The machine is now ready for use after aligning the place to be sewn.

OPERATING INSTRUCTIONS

Once threaded, you can begin sewing. This machine creates a single chain stitch.

- **Fabric Placement:** Place the fabric under the cloth pressing plate, aligning the edge you wish to sew.
- **Starting to Sew:** Gently press the machine down, similar to a stapler. The machine will automatically move forward as it stitches.
- **Movement:** Move the machine from left to right along the desired stitch line.
- **Stitch Security:** Since this is a single chain stitch, ensure the last stitch is anchored to prevent the seam from unraveling. You may need to tie off the end or sew a few stitches back over the beginning.

Important Considerations:

- Please use a little force when sewing clothes to ensure proper stitch formation.
- The fabric thickness shall not exceed 0.8 mm.

You can easily fix or repair clothes zippers

MAINTENANCE

- **Cleaning:** Regularly remove lint and thread scraps from the needle area and feed dogs using a small brush.
- **Storage:** Store the machine in a dry place, away from direct sunlight and extreme temperatures.
- **Needle Replacement:** If the needle becomes bent or dull, replace it with a new one. Loosen the needle head screw, remove the old needle, insert the new one, and tighten the screw.

TROUBLESHOOTING

Problem	Possible Cause	Solution
---------	----------------	----------

Problem	Possible Cause	Solution
Thread keeps breaking	Incorrect threading, thread tension too high, dull/bent needle, fabric too thick.	Re-thread the machine carefully. Check thread tension. Replace needle. Ensure fabric thickness is within limits (max 0.8 mm).
Stitches are loose or skipping	Incorrect threading, improper fabric placement, dull needle.	Verify threading. Ensure fabric is flat and held firmly by the cloth pressing plate. Replace needle.
Machine not moving forward	Fabric too thick, mechanism jammed.	Do not force the machine. Check fabric thickness. Clear any obstructions.
Stitch unravels easily	Single chain stitch characteristic, end not secured.	Always secure the end of your stitch by tying a knot or sewing a few stitches back over the beginning.
