6. TROUBLESHOOTING

If you encounter any issues with your playset, please refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Playset does not transform smoothly or gets jammed.	Figures may not be correctly seated on the platforms, or debris might be obstructing the mechanism.	Ensure both figures are properly aligned and fully seated on their respective platforms. Check for any small objects or debris that might be blocking the rotation mechanism and carefully remove them. Avoid forcing the mechanism.

Problem	Possible Cause	Solution
Figures are difficult to place or remove from the platforms.	Incorrect angle or excessive force being applied.	Gently align the figures' feet with the pegs on the platforms. Apply light, even pressure to snap them into place. When removing, pull straight up. Avoid bending or twisting the figures.
Only one figure is visible after transformation, or neither is fully visible.	The internal rotating part may have shifted out of alignment.	Gently push the top figure down to reset the mechanism. If it remains misaligned, carefully rotate the internal section manually until the figures are correctly positioned.
