Setup

Follow these steps to set up your dehumidifier for first use:

1. **Unpacking:** Carefully remove the dehumidifier from its packaging. Retain all packaging materials for future storage or transport.
2. **Positioning:** Place the dehumidifier on a flat, stable surface. Ensure there is at least 20 cm (8 inches) of space around the air inlets and outlets to allow for proper air circulation. Do not place it near heat sources or in direct sunlight.
3. **Mobility:** The unit is equipped with practical castors and side handles for easy transport.

4. **Power Connection:** Plug the power cord into a suitable grounded electrical outlet.

Operating Instructions

The De'Longhi DDSX220 offers various functions to manage humidity and air quality.

Dehumidification Mode

This mode removes excess moisture from the air. The unit can remove up to 20 liters of humidity per day.

- **Setting Humidity Level:** Use the digital control panel to set your desired humidity level. The unit will operate until this level is reached, then automatically switch to standby.
- **Fan Speed:** Choose between 3 fan speeds or select automatic speed for optimized performance.
- **Anti-freeze Device:** The electronic anti-freeze device allows operation even at lower temperatures (down to 2°C).

Laundry Function

The dedicated Laundry function helps to dry clothes faster by optimizing dehumidification performance.

Figure 5: The De'Longhi DDSX220 Dehumidifier operating in a room with clothes drying on a rack, demonstrating its Laundry function capability.

To activate the Laundry function, select it from the control panel. This function can reduce clothes drying time by up to 50% compared to natural drying.

Air Filtration System

The unit features a double-stage air filtration system with an anti-dust filter and a Biosilver filter with silver ions to help purify the air.

Figure 6: View of the De'Longhi DDSX220 Dehumidifier's two-action filtration system, showing the outer dust filter and the inner Biosilver filter.

The filtration system helps to reduce the proliferation of bacteria and block larger dust particles, contributing to cleaner air.

Maintenance

Regular maintenance ensures the longevity and efficiency of your dehumidifier.

Emptying the Water Tank / Continuous Drainage

The dehumidifier collects condensed water in a transparent, removable 5-liter water tank. The appliance automatically stops when the tank is full.

Figure 7: The transparent, easily removable water tank of the De'Longhi DDSX220 Dehumidifier, allowing for quick visual checks of the water level.

To empty the tank: Carefully pull out the tank, discard the collected water, and reinsert the tank firmly until it clicks into place.

For continuous operation, you can set up continuous drainage using a suitable hose (included).

Figure 8: Connecting the continuous drainage hose to the back of the De'Longhi DDSX220 Dehumidifier for uninterrupted operation.

To set up continuous drainage: Locate the drainage outlet on the back of the unit. Connect one end of the hose to this outlet and direct the other end to a suitable drain or container, ensuring a continuous downward slope for water flow.

Cleaning the Air Filter

The air filter should be cleaned regularly (e.g., every two weeks) to maintain optimal performance and air quality.

Figure 9: Removing the air filter from the side of the De'Longhi DDSX220 Dehumidifier for cleaning.

1. Unplug the appliance from the power outlet.
2. Locate the filter cover on the side/back of the unit and open it.
3. Remove the filter(s).
4. Clean the filter using a vacuum cleaner or wash it gently with lukewarm water and a mild detergent. Rinse thoroughly.
5. Allow the filter to dry completely before reinserting it.
6. Close the filter cover.

Troubleshooting

If you encounter issues with your dehumidifier, refer to the table below for common problems and solutions.

Problem	Possible Cause	Solution
Dehumidifier does not turn on.	No power supply. Water tank is full or incorrectly inserted.	Check power cord connection and outlet. Empty and correctly reinsert the water tank.
No water collected.	Humidity level is too low. Room temperature is too low. Air filter is clogged.	Set a lower desired humidity level. Ensure room temperature is above 2°C. Clean the air filter.
Airflow is weak.	Air inlets/outlets are blocked. Air filter is clogged.	Clear any obstructions around the unit. Clean the air filter.
Unit is noisy.	Unit is not on a flat surface. Fan speed is too high.	Place the unit on a stable, flat surface. Reduce the fan speed.

If the problem persists after trying these solutions, please contact customer support.
