Placement

1. Place the oven on a stable, heat-resistant, and level surface.
2. Ensure there is adequate ventilation around the oven (at least 10-15 cm clearance on all sides and top) to allow for proper heat dissipation.
3. Do not place the oven near flammable materials such as curtains, walls, or paper.
4. Ensure the power cord is easily accessible and not obstructed.

Initial Cleaning and First Use

1. Before first use, wipe the interior and exterior of the oven with a damp cloth. Dry thoroughly.
2. Wash the wire rack and crumb tray in warm, soapy water, rinse, and dry completely.
3. To eliminate any manufacturing odors, operate the oven empty for approximately 15 minutes at the maximum temperature setting (e.g., 230°C / 450°F) with the function selector set to 'Bake'. Ensure the area is well-ventilated during this process. A slight odor or smoke is normal during this initial burn-off.

Preheating the Oven

For best cooking results, it is recommended to preheat the oven before placing food inside.

1. Place the wire rack in the desired position.
2. Turn the **Function Selector Knob** to the desired cooking mode (e.g., Bake).

- **Toast:** Often combines top and bottom elements for even toasting of bread and similar items.

6. CLEANING AND MAINTENANCE

Regular cleaning and proper maintenance will ensure the longevity and optimal performance of your oven.

Before Cleaning

- Always unplug the oven from the power outlet and allow it to cool completely before cleaning.

Exterior Cleaning

Wipe the exterior surfaces with a damp cloth and mild detergent. Dry thoroughly with a soft cloth.

Remove the wire rack and crumb tray. Wash them in warm, soapy water. Rinse well and dry completely before returning them to the oven.

Glass Door

Clean the glass door with a glass cleaner or a damp cloth. Avoid harsh chemicals that could damage the glass or seals.
