## 2. SAFETY INSTRUCTIONS

Always prioritize safety when using electrical equipment. Failure to follow these instructions may result in electric shock, fire, or serious injury.

- **Circuit Breaker:** The cord reel is equipped with a built-in circuit breaker with overload protection. If the rated current or voltage is exceeded, the circuit breaker will automatically trip to protect connected devices from damage. If this occurs, disconnect devices, reset the breaker, and reduce the load.
- **Proper Usage:** Do not exceed the maximum wattage of 1560 Watts or amperage capacity of 13 Amps.
- **Cable Condition:** Regularly inspect the cord for any signs of damage, cuts, or fraying. Do not use if the cable is damaged.
- **Environmental Conditions:** The 14AWG SJTW cable is designed for heavy-duty, high-visibility outdoor use. However, avoid submerging the cord reel in water or using it in extremely wet conditions.
- **Unwinding:** Always fully unwind the cord when using it to prevent overheating, especially when drawing high power.
- **Children and Pets:** Keep the cord reel and connected devices out of reach of children and pets.

### 4. SETUP

1. **Unpack:** Carefully remove the cord reel from its packaging.
2. **Position:** Place the cord reel on a stable, flat surface. Ensure the area is clear of obstructions and potential hazards.
3. **Unwind:** Grasp the end of the extension cord (the male plug) and pull it away from the reel. Fully unwind the necessary length of cord for your application. For safety, it is recommended to fully unwind the cord when using high-power tools to prevent heat buildup.
4. **Connect to Power:** Plug the male end of the cord into a suitable 120V grounded electrical outlet.

## 5. OPERATING INSTRUCTIONS

1. **Power On:** Once the cord reel is plugged into a power source, press the 'POWER' switch located on the face of the reel to the 'ON' position. A power light indicator will illuminate.
2. **Connect Devices:** Plug your electrical tools or appliances into any of the four grounded outlets on the cord reel.
3. **Monitor Overload:** The cord reel has an 'OVERLOAD' indicator light. If this light illuminates and power is cut, it indicates the circuit breaker has tripped due to an overload. Disconnect some devices, then reset the circuit breaker by pressing the 'SAFETY' button.
4. **Power Off:** When finished, switch the 'POWER' button to the 'OFF' position before disconnecting devices or unplugging the reel from the wall.
5. **Rewind:** Use the hand crank to smoothly rewind the extension cord back onto the reel. Ensure the cord is guided properly to prevent tangles. Secure the male plug into the integrated cord locking system for compact storage.

- **Inspection:** Periodically check the cord, plug, and outlets for any signs of wear, damage, or loose connections.
