### 3.1 Unpacking

Carefully remove all packaging materials. Ensure no parts are missing or damaged. Keep packaging materials away from children.

### 3.3 Initial Power-Up

After placing the refrigerator, wait at least 4-6 hours before plugging it into a power outlet. This allows the refrigerant to settle, preventing potential damage to the cooling system. Plug into a dedicated 120 Volt AC outlet.

### 3.4 Door Reversibility

The door orientation is reversible. Refer to the detailed instructions in the full manual for steps on how to reverse the door swing if needed.

## 4. OPERATING INSTRUCTIONS

---

### 4.1 Temperature Control

The refrigerator features easily accessible temperature controls. Adjust the thermostat dial inside the refrigerator compartment to your desired cooling level. Higher numbers typically indicate colder settings. Allow several hours for the temperature to stabilize after adjustment.

### 4.2 Multi-Vent Technology

This refrigerator utilizes multi-vent technology to ensure consistent and even cooling throughout the fresh food compartment. Avoid blocking the vents with food items to maintain optimal air circulation.

### 4.3 Freezer Compartment

The top freezer compartment is designed for storing frozen foods. It includes a fixed wire shelf and a door bin for organization. Note that this model features a manual defrost system for the freezer.

### 4.4 Storage Features

- **Glass Shelves:** The refrigerator compartment contains adjustable glass shelves. These shelves are spill-proof, making cleanup easier.
- **Door Bins:** Multiple bins on the refrigerator door provide additional storage for smaller items and beverages.
- **Crisper Bins:** A dedicated crisper bin at the bottom helps preserve the freshness of fruits and vegetables.

## 5. MAINTENANCE

---

### 5.1 Cleaning

Always unplug the refrigerator before cleaning. Use a mild detergent and warm water to clean interior and exterior

surfaces. Wipe dry with a soft cloth. The spill-proof glass shelves can be removed for thorough cleaning.

## 5.2 Manual Defrost

The freezer compartment requires manual defrosting. When frost builds up to about 1/4 inch thickness, unplug the unit and remove all food items. Allow the frost to melt naturally or use a plastic scraper (do not use sharp objects). Place towels at the bottom to absorb water. Once defrosted, clean and dry the interior before plugging the unit back in.
