MAINTENANCE

Cleaning

Regular cleaning is essential for optimal machine performance. Use the provided lint brush to remove lint and dust from the bobbin area, feed dogs, and tension discs. It is recommended to clean the machine after every few hours of sewing or after completing a large project.

Needle Replacement

Replace the needle frequently, especially when starting a new project or if you notice skipped stitches or fabric damage. Always use the correct needle type and size for your fabric.

Storage

When not in use, store the machine in a dry, dust-free environment. Use the hard cover to protect it from dust and physical damage.
