### Stauer 38061

## Stauer Jet Setter Stainless Steel Chronograph Watch

Model: 38061

### INTRODUCTION

Thank you for choosing the Stauer Jet Setter Stainless Steel Chronograph Watch. This timepiece combines classic design with precise functionality, featuring a durable stainless steel construction and a reliable crystal movement. This manual provides essential information for setting up, operating, and maintaining your watch to ensure its longevity and accurate performance.

## SETUP

### 1. Setting the Time

1. Pull the crown (located on the right side of the watch case) out to the second click position.
2. Rotate the crown clockwise or counter-clockwise to set the hour and minute hands to the desired time.
3. Push the crown back in to the normal position to start the watch.

### 2. Setting the Date

1. Pull the crown out to the first click position.
2. Rotate the crown counter-clockwise to adjust the date in the date window (located at 4 o'clock).
3. Once the correct date is displayed, push the crown back in to the normal position.
4. *Note: Avoid setting the date between 9 PM and 3 AM, as this may interfere with the automatic date change mechanism.*

### 3. Adjusting the Bracelet

The stainless steel bracelet can be adjusted by removing or adding links. It is recommended to have this procedure performed by a qualified jeweler to prevent damage to the watch or bracelet.

## OPERATING THE CHRONOGRAPH

Your Stauer Jet Setter watch features a chronograph function for measuring elapsed time. The watch has three subdials and two pushers (buttons) located at the 2 o'clock and 4 o'clock positions.

- **Top Pusher (at 2 o'clock):** Starts and stops the chronograph.
- **Bottom Pusher (at 4 o'clock):** Resets the chronograph to zero.
- **Subdial at 6 o'clock:** Chronograph seconds.
- **Subdial at 9 o'clock:** Chronograph minutes.

- **Subdial at 3 o'clock:** 24-hour military time indicator.

## Using the Chronograph:

1. To start timing, press the **top pusher**. The chronograph second hand will begin to move.
2. To stop timing, press the **top pusher** again. The chronograph hands will stop, indicating the elapsed time.
3. To reset the chronograph, press the **bottom pusher**. The chronograph hands will return to their zero positions.
4. To measure split times (lap times), press the **top pusher** to start, then press the **bottom pusher** to temporarily stop the hands to read an intermediate time. Press the **bottom pusher** again to resume timing. Press the **top pusher** to stop the final time, then the **bottom pusher** to reset.

## Tachymeter Function:

The tachymeter bezel on your watch can be used to measure speed over a known distance (e.g., 1 mile or 1 kilometer). Start the chronograph when you begin the distance, and stop it when you complete the distance. The number on the tachymeter scale corresponding to where the chronograph second hand points indicates the speed in units per hour (e.g., miles per hour or kilometers per hour).

## MAINTENANCE

### 1. Cleaning Your Watch

To maintain the appearance of your watch, wipe it regularly with a soft, dry cloth. For the stainless steel bracelet, a slightly damp cloth can be used, followed by a dry cloth. Avoid using harsh chemicals or abrasive materials, as these can damage the finish.

### 2. Water Resistance

Your Stauer Jet Setter watch is water resistant to 3 ATM (30 meters). This means it is suitable for everyday use and can withstand splashes or brief immersion in water. However, it is **not** suitable for swimming, showering, or diving. Avoid operating the crown or pushers when the watch is wet.

### 3. Battery Replacement

The watch is powered by a quartz movement and requires a battery. When the watch stops or the second hand begins to jump erratically (if applicable), it indicates a low battery. Battery replacement should be performed by a qualified watch technician to ensure proper sealing and function.

### 4. Storage

When not wearing your watch, store it in a cool, dry place away from direct sunlight, extreme temperatures, and strong magnetic fields. The original packaging or a watch box is ideal for storage.

## TROUBLESHOOTING

Problem	Possible Cause	Solution
Watch stops or runs intermittently.	Low battery.	Replace the battery (professional service recommended).
Date changes at noon instead of midnight.	Time is set to AM instead of PM.	Advance the time by 12 hours.
Chronograph hands do not reset to zero.	Requires calibration or internal issue.	Consult a watch technician for adjustment or repair.
Condensation under the crystal.	Exposure to extreme temperature changes or moisture ingress.	Seek professional service immediately to prevent internal damage.

## SPECIFICATIONS

- **Model Number:** 38061
- **Movement:** Quartz Crystal
- **Case Material:** Stainless Steel
- **Bracelet Material:** Stainless Steel
- **Dial Color:** Black
- **Functions:** Time (Hour, Minute, Second), Date, 24-hour indicator, Chronograph (Seconds, Minutes), Tachymeter
- **Water Resistance:** 3 ATM (30 meters)
- **Package Dimensions:** 4.2 x 4.1 x 3.9 inches
- **Item Weight:** 11.99 ounces
- **Battery:** 1 Unknown battery (included)
