K&F Concept 67mm MC UV Protection Filter

Model: KF.K67 | Brand: K&F Concept

Instruction Manual

Introduction

The K&F Concept 67mm MC UV Protection Filter is designed to protect your camera lens from dust, scratches, fingerprints, and accidental damage, while also minimizing the amount of ultraviolet (UV) light reaching the sensor. This helps reduce haze and improve contrast in your digital images and videos, especially in outdoor environments.

Key Features

- **UV Protection:** Made from Japan import optical glass, it protects your lens from dirt, scratches, fingerprints, or accidental damage.
- **Slim Frame Design:** Features a super slim and lightweight aluminum frame, which minimizes impact on light and effectively avoids dark corners (vignetting) for wide-angle lenses.
- **Multi-Layer Coatings:** Equipped with 18 multi-layer coatings to effectively restore image quality without negatively affecting photo color.
- **Haze Reduction:** Reduces haze and improves contrast in video and digital images by minimizing ultraviolet (UV) light and eliminating bluish casts.
- **Compatibility:** Compatible with all 67mm lenses. Always verify your camera's lens thread size (indicated by a "ø"

symbol) before purchase.

Setup and Installation

Before installing the UV filter, ensure your lens is clean and free of dust. The filter is designed to screw directly onto the front thread of your camera lens.

1. Verify Lens Thread Size

Locate the thread size on your camera lens. This is usually marked on the lens barrel or underneath the lens cap, preceded by a "ø" (diameter) symbol. This filter is specifically for 67mm lenses.

2. Attaching the Filter

1. Carefully remove the lens cap from your camera lens.
2. Align the threads of the UV filter with the threads on the front of your lens.
3. Gently rotate the filter clockwise until it catches the threads. Avoid forcing it, as this can cross-thread and damage both the filter and your lens.
4. Continue to screw the filter on until it is snug. Do not overtighten.

Operating the Filter

Once installed, the K&F Concept MC UV filter works passively to enhance your photography and protect your equipment. No active adjustments are required for its primary functions.

Benefits in Use:

- **Improved Image Clarity:** The filter's multi-layer coatings and UV reduction capabilities help to minimize atmospheric haze, leading to clearer and sharper images.
- **Vibrant Colors:** By reducing the bluish cast caused by UV light, the filter helps to render colors more accurately and vibrantly, especially in outdoor and landscape photography.
- **Lens Protection:** The filter acts as a sacrificial layer, protecting the delicate front element of your expensive camera lens from dust, moisture, scratches, and accidental impacts.

Maintenance

To ensure optimal performance and longevity of your K&F Concept UV filter, regular cleaning is recommended.

Cleaning Instructions:

1. Use a soft, lint-free microfiber cleaning cloth (such as the one provided with the filter) to gently wipe away dust and smudges.
2. For stubborn marks or fingerprints, a small amount of lens cleaning solution can be applied to the cloth, not directly to the filter.
3. Wipe in a circular motion from the center outwards until the surface is clean and streak-free.
4. Store the filter in its protective case when not in use to prevent dust accumulation and accidental damage.

Troubleshooting

Vignetting (Dark Corners)

While the K&F Concept UV filter features a slim frame designed to minimize vignetting, especially on wide-angle lenses, it can still occur in certain extreme conditions or with specific lens combinations.

- **Check Lens Compatibility:** Ensure the filter size matches your lens's thread size exactly.
- **Remove Additional Filters:** Stacking multiple filters (e.g., a UV filter and a CPL filter) can increase the thickness and lead to vignetting. Try using only the UV filter.
- **Adjust Focal Length:** Vignetting is more common at wider focal lengths. Zooming in slightly may alleviate the issue.
