1. **Wearing the Headphones:** Adjust the headband so that the earcups comfortably cover your ears. The circumaural design is intended to fully enclose your ears for better sound isolation and comfort.
2. **Volume Control:** Adjust the volume directly from your audio source. Start with a low volume and gradually increase it to a comfortable listening level. Avoid excessively high volumes to prevent hearing damage.

- **Storage:** When not in use, store the headphones in a clean, dry place away from extreme temperatures and direct sunlight. Avoid wrapping the cable too tightly to prevent damage.
- **Cable Care:** Do not pull on the cable to disconnect the headphones from a device. Always grasp the plug firmly.

7. TROUBLESHOOTING

If you encounter issues with your headphones, try these basic troubleshooting steps:

- **No Sound:**
 - Ensure the headphone connector is fully inserted into the audio source.
 - Check the volume level on your audio source and ensure it is not muted.
 - Test the headphones with a different audio source or device to rule out a device-specific issue.
- **Distorted Sound:**
 - Lower the volume on your audio source.
 - Ensure the audio source is playing a high-quality audio file.
