1. Ensure your computer is connected to the X0 (LAN) port of the TZ400.
2. Configure your computer's network adapter to obtain an IP address automatically (DHCP). The TZ400's X0 interface typically acts as a DHCP server.
3. Open a web browser and navigate to the default management IP address, usually <http://192.168.168.168>.
4. Log in using the default credentials (refer to the Quick Start Guide or device label for initial username and password). You will be prompted to change the password upon first login.
5. Follow the on-screen setup wizard to configure basic network settings, including WAN connectivity and time zone.

- Monitor system logs for unusual activity or errors.
- Verify that all security services (e.g., IPS, Anti-Virus) are active and up-to-date.
- Check the physical connections and LED indicators for normal operation.

4. TROUBLESHOOTING

4.1 Common Issues

- **No Internet Access:**
 - Verify the WAN cable connection to your ISP modem.

- Check WAN status in the management interface.
- Ensure your ISP connection is active.

- **Cannot Access Management Interface:**

- Confirm your computer is connected to a LAN port (e.g., X0) and has an IP address from the TZ400.
- Try pinging the default gateway (192.168.168.168).
- Clear your browser cache or try a different browser.

- **Slow Network Performance:**

- Check for high CPU or memory usage in the system monitoring section.
- Review firewall logs for excessive blocked traffic or attacks.
- Ensure firmware is up-to-date.

1. Locate the reset button on the device (often recessed).
2. With the device powered on, use a paperclip or similar pointed object to press and hold the reset button for approximately 10-15 seconds until the device reboots.
