### 3.4 Initial Start-up

After positioning the appliance, wait at least 2-4 hours before plugging it in. This allows the refrigerant to settle. Once plugged in, set the desired temperature using the control panel. ## 6. TROUBLESHOOTING

Before contacting customer service, please check the following common issues and their potential solutions:

- **Appliance not cooling:** Check if the power cord is securely plugged in. Ensure the temperature settings are correct. The appliance might be in Holiday Mode.
- **Excessive noise:** Verify that the appliance is level and not touching any walls or furniture. Normal operating noises include compressor hum and refrigerant circulation sounds.
- **Water on the floor:** Check if the drain hole in the refrigerator compartment is clear. Ensure the door seals are clean and intact, and the doors are closing properly.
- **Temperature alarm sounds:** This may occur after the door has been open for too long, after adding a large quantity of warm food, or during a power outage. Check door closure and allow time for the temperature to stabilize.
- **Food freezing in the refrigerator:** The temperature setting might be too low, or food items might be placed too close to the cold air outlet.
