## Glideaway Queen Standalone Only

# Glideaway Premium Heavy Duty Bed Frame User Manual

Model: Queen Standalone Only (ASIN: B07SSDMDYB)

## PRODUCT OVERVIEW

The Glideaway Premium Heavy Duty Bed Frame is designed for robust support of box spring and mattress sets. Constructed with 20% more steel, including 1½ x 1½ angle iron for side rails and cross arms, it offers superior strength and durability. This frame features a 9-leg design with T-shaped leg interlocks for maximum stability and wide glide feet for even weight distribution, making it suitable for various mattress types, including waterbeds. This Queen size standalone frame is proudly made in the USA from 100% recycled rail steel, emphasizing an earth-friendly approach.

## SAFETY INFORMATION

Always follow assembly instructions carefully. Do not exceed the maximum recommended weight capacity. Be cautious of sharp edges and potential pinch points during assembly and when moving the frame. Ensure all connections are secure before placing a mattress or box spring on the frame.

## SETUP AND ASSEMBLY

Assembly of the Glideaway Premium Heavy Duty Bed Frame is designed to be quick and easy, requiring only a screwdriver and pliers. It is recommended to assemble the frame with at least two people for ease and safety.

### Components Checklist:

- Side Rails (2)
- Cross Supports (3)
- Legs with Wide Glide Feet (9)
- Headboard Brackets (2)
- Assembly Hardware (bolts, nuts, washers)

Before beginning, ensure all components are present and undamaged. If any parts are missing or damaged, contact customer support before proceeding.

## Assembly Steps:

1. **Unpack and Identify Parts:** Carefully remove all components from the packaging. Lay out all side rails, cross supports, legs, and hardware.
2. **Connect Side Rails:** Position the two long side rails parallel to each other. The T-shaped leg interlocks on the side rails are designed to connect securely.
3. **Attach Cross Supports:** Insert the three cross supports between the side rails. Ensure they are evenly spaced and securely seated within the designated slots. The T-shaped leg interlocks above and below the side rail for maximum strength.
4. **Install Legs:** Attach the nine legs to the frame. The wide glide feet should be facing downwards to distribute weight evenly across the floor. Tighten all leg connections firmly with a screwdriver and pliers.
5. **Attach Headboard Brackets (Optional):** If using a headboard, attach the included headboard brackets to the appropriate end of the frame using the provided hardware. Ensure they are securely fastened.
6. **Final Check:** Once assembled, gently lift and shake the frame to ensure all connections are tight and the frame is stable. Re-tighten any loose bolts.

Figure 3: Detailed view of a leg and cross support connection, highlighting the robust T-shaped interlock design.

Figure 4: An alternative perspective of the leg and cross support, demonstrating the secure fastening mechanism.

## OPERATING AND USAGE

Once the bed frame is fully assembled and stable, it is ready for use. Place your box spring directly onto the frame, followed by your mattress. The frame is designed to support various mattress types, including heavy memory foam mattresses and waterbeds, due to its high carbon, recycled railroad steel construction and superior strength. The wide glide feet ensure proper weight distribution and protect your flooring. While the frame is built for heavy loads, it is

generally recommended not to exceed a total weight of 500 lbs (including mattress, box spring, and occupants) to ensure longevity and safety, based on user experiences.

## MAINTENANCE

To ensure the longevity and continued stability of your Glideaway bed frame, periodic maintenance is recommended:

- **Check Connections:** Every 6-12 months, inspect all bolts and connections to ensure they remain tight. Re-tighten any loose hardware using a screwdriver and pliers.
- **Cleaning:** Wipe down the metal frame with a damp cloth to remove dust and debris. Avoid using harsh chemical cleaners that may damage the finish.
- **Inspect Legs and Glides:** Periodically check the wide glide feet for wear or damage. While designed for durability, replacement may be necessary over time if significant wear occurs.

## TROUBLESHOOTING

Problem	Possible Cause	Solution
Frame squeaks or creaks	Loose connections; uneven floor; friction between metal parts.	Tighten all bolts and connections. Ensure the frame is on a level surface. Apply a small amount of silicone spray or wax to contact points if squeaking persists.
Frame feels unstable or wobbly	Loose bolts; incorrect assembly; damaged leg.	Re-check all assembly steps and ensure all bolts are securely tightened. Verify that all legs are properly installed and undamaged.
Missing or incorrect parts upon delivery	Packaging error; shipping damage.	Do not attempt to assemble. Contact Glideaway customer support immediately with your purchase details for assistance.

## SPECIFICATIONS

Feature	Detail
Brand	Glideaway
Model	Queen Standalone Only (ASIN: B07SSDMDYB)
Size	Queen
Product Dimensions	77"L x 61"W x 7.5"H
Height From Floor	7.5"
Special Feature	Can hold and distribute a waterbed's weight
Color	Standalone Only
Finish Type	Primed
