- **Easy to Track:** Includes 28 number stickers and 28 hooks for numerical organization of keys.
- **Durable Construction:** Made from alloy steel for enhanced security.

Setup and Installation

The Uniclife Key Cabinet is designed for easy wall mounting. Ensure you select a suitable indoor location for installation.

Mounting the Cabinet

1. Choose a sturdy indoor wall surface for installation.
2. Open the key cabinet door to access the pre-formed mounting holes inside.
3. Using the included screws and wall anchors, securely fasten the cabinet to the wall. Ensure the cabinet is level and firmly attached before use.

Operating Instructions

Setting/Resetting the Combination Code

The initial factory code for the combination lock is "000". You can easily reset this code to your desired 3-digit combination.

1. Open the key cabinet door.
2. Locate the control lever inside the cabinet, near the combination lock mechanism.
3. Push the control lever from position **A** to position **B**.
4. While the lever is in position **B**, set your desired 3-digit code by rotating the number dials on the front of the lock.
5. Once your new code is set, pull the control lever back from position **B** to position **A**.
6. Your new combination code is now set. Test the new code before closing and locking the cabinet.

Locking and Unlocking the Cabinet

- To **unlock**, align the dials to your set 3-digit combination and turn the knob to the left.
- To **lock**, close the cabinet door, turn the knob to the right, and then scramble the numbers on the dials.

Key Organization

The cabinet includes 28 colorful key tags and number stickers to help you organize your keys efficiently.

1. Use the provided number stickers to label each key hook inside the cabinet numerically (1-28).
2. For each key tag, remove the blank paper insert, write relevant information (e.g., room number, key purpose), and reinsert it.
3. Attach your keys to the key rings on the tags.
4. Hang the key tags onto the corresponding numbered hooks inside the cabinet.

Maintenance

To ensure the longevity and proper functioning of your key cabinet, follow these maintenance guidelines:

- **Cleaning:** Wipe the exterior and interior surfaces with a soft, damp cloth. Avoid using abrasive cleaners or solvents, as they may damage the finish.
- **Lock Mechanism:** Periodically check the combination lock dials for smooth operation. If they become stiff, a small amount of graphite lubricant can be applied, but avoid oil-based lubricants.
- **Mounting:** Regularly inspect the wall mounting screws to ensure they remain tight and secure.

Troubleshooting

Problem	Possible Cause	Solution
Combination lock dials are hard to rotate.	Dust or debris accumulation; lack of lubrication.	Clean the dials with a soft brush. Apply a small amount of graphite lubricant if necessary.
Unable to set a new passcode.	Control lever not fully moved to position B; incorrect procedure.	Ensure the control lever is firmly pushed to position B before setting the new code. Follow the "Setting/Resetting the Combination Code" steps precisely.
Cabinet feels loose on the wall.	Mounting screws are loose or wall anchors are not secure.	Tighten the mounting screws. If the issue persists, consider using more robust wall anchors or relocating the cabinet to a stronger wall section.
