3. SETUP AND INSTALLATION

Proper installation is crucial for the stability and longevity of the wall mount. Ensure you have the necessary tools before beginning.

3.1 Tools Required

- Drill
- Drill bits (appropriate for wall material and screw size)
- Measuring tape
- Pencil or marker
- Level
- Screwdriver (compatible with mounting screws)
- Mounting screws and wall anchors (not included, select based on wall type)

3.2 Installation Steps

1. **Select Location:** Choose a suitable wall location that is clean, dry, and structurally sound. Consider the height for easy access to tools.
2. **Mark Drilling Points:** Hold the wall mount against the desired location. Use a level to ensure it is perfectly horizontal. Mark the two mounting hole positions with a pencil.
3. **Drill Holes:** Using the appropriate drill bit, carefully drill holes at the marked points. Ensure the depth is sufficient for the wall anchors.
4. **Insert Wall Anchors:** Insert the wall anchors into the drilled holes until they are flush with the wall surface.
5. **Mount the Bracket:** Align the wall mount's holes with the installed wall anchors. Insert the mounting screws through the mount and into the anchors.
6. **Secure the Mount:** Tighten the screws firmly but do not overtighten, as this can damage the wall or the mount. Ensure the mount is secure and does not wobble.

5.1 Cleaning

- **Frequency:** Clean the wall mount regularly, especially in environments requiring high hygiene standards.

- **Rinsing:** Rinse thoroughly with clean water to remove all detergent residue.
- **Drying:** Dry the mount completely with a clean, dry cloth to prevent water spots and maintain shine.
- **Behind the Mount:** The design allows for easy cleaning between the mount and the wall. Utilize this feature to maintain overall wall hygiene.

5.2 Inspection

- Periodically check the mounting screws for tightness. Retighten if necessary to ensure the mount remains secure.
- Inspect the stainless steel for any signs of damage or corrosion. Address any issues promptly.

6. TROUBLESHOOTING

This section addresses common issues you might encounter with your wall mount.

Problem	Possible Cause	Solution
Mount feels loose or wobbly.	Screws are loose; wall anchors are not secure; wall material is insufficient.	Tighten mounting screws. If still loose, remove and inspect wall anchors; replace if damaged. If wall material is weak, consider using different anchors or reinforcing the wall.
Difficulty hanging tools.	Tools are too large or heavy for the hooks; hooks are obstructed.	Ensure tools are compatible with the hook size and weight capacity. Clear any obstructions.
Stainless steel shows stains or dullness.	Water spots; residue from cleaning agents; lack of drying.	Clean with mild detergent and warm water, rinse thoroughly, and dry immediately with a soft, clean cloth. For stubborn spots, use a stainless steel cleaner.
