Troubleshooting

If you encounter issues while using your JXMOX adapter, consider the following troubleshooting steps:

Problem	Possible Cause	Solution
Device not charging/data not syncing.	Loose connection, incompatible cable, or faulty device port.	Ensure both ends of the adapter and cable are securely connected. Try a different Micro USB cable. Test the adapter with another Mini USB device or the device with another Mini USB cable if available.
Adapter feels loose in device port.	Port wear on device or slight manufacturing tolerance.	While the adapter is designed for a snug fit, some device ports may have wear. Ensure it's pushed in firmly. If the issue persists and affects functionality, contact customer support.
Slow charging or data transfer.	Cable quality, power source limitations, or device limitations.	Use a high-quality Micro USB cable. Ensure your power source (e.g., wall adapter, USB port) provides sufficient current. Some older devices may have slower transfer speeds.

If these steps do not resolve your issue, please refer to the "Warranty and Support" section for further assistance.
