4.3 Storage

When not in use for extended periods, store the TC0520 in a cool, dry place, away from direct sunlight and extreme temperatures. Remove batteries if storing for a very long time to prevent leakage.

5. TROUBLESHOOTING

- **Device does not power on:**
Ensure batteries are inserted correctly with the correct polarity. Check if the batteries are fresh and have sufficient charge. If using USB power, ensure the USB cable is properly connected and the power source is active.
- **Inaccurate temperature readings:**
Verify that the correct thermocouple type (K, J, E, or T) is selected in the device's setup menu matching the connected probes. Ensure thermocouples are properly connected to their respective ports and are not damaged. Allow sufficient time for the thermocouple to stabilize at the measurement point.
- **Cannot connect to PC software:**
Ensure the USB cable is securely connected to both the device and the PC. Verify that the PC software is installed correctly and is the latest version. Check your PC's device manager to ensure the USB driver for the TC0520 is recognized. Try restarting both the device and the PC.
- **Data logging not working:**
