Installing the Extender Ring:

3. OPERATING INSTRUCTIONS

Using the 5-inch Stainless Steel Extender Ring:

The extender ring is designed to increase the cooking capacity of your Nuwave Primo Oven. It is ideal for preparing larger food items such as whole turkeys (up to 14 lbs), hams (up to 12 lbs), and large roasts that would otherwise not fit under the standard dome. This allows for more even cooking of taller items by preventing the top from scorching.

Using the Reversible 3-inch Cooking Rack:

The reversible cooking rack facilitates layered cooking, enabling you to prepare multiple food items simultaneously. Place the rack on the oven base or within the extender ring. You can cook one item on the bottom and another on the rack, optimizing cooking efficiency. The rack is reversible, offering two different heights for varied cooking needs.

Using the 10-inch Enamel Baking Pan:

This baking pan is suitable for a variety of baking tasks, including cakes, casseroles, and roasted vegetables. For items that may release oils or fats, such as meats, it is recommended to line the pan with aluminum foil to protect the enamel finish and simplify cleaning.

Using the Stainless Steel Air Fry Basket:

The air fry basket allows you to achieve crispy results for foods typically prepared in a deep fryer, such as french fries, chicken wings, and other fried snacks, using minimal to no oil. Place the food in the basket and position it on the cooking rack or directly on the oven base, depending on the recipe and desired airflow.

4. CARE AND MAINTENANCE

All components of the Nuwave Primo Extender Ring Kit are designed for easy cleaning.

- **Dishwasher Safe:** The 5-inch Stainless Steel Extender Ring, Reversible 3-inch Cooking Rack, 10-inch Enamel Baking Pan, and Stainless Steel Air Fry Basket are all dishwasher safe.
- **Hand Washing:** For best results and to prolong the life of the enamel pan, hand washing with warm, soapy water and a non-abrasive sponge is recommended. Rinse thoroughly and dry immediately.
- **Stubborn Residue:** For baked-on food, soak the components in warm, soapy water before cleaning. Avoid using harsh abrasive cleaners or metal scouring pads, which can damage the surfaces.

5. TROUBLESHOOTING

This section addresses common observations and provides guidance for optimal use.

- **Uneven Cooking / Scorching:** If you experience the top of your food scorching while the bottom remains undercooked, ensure the 5-inch Stainless Steel Extender Ring is properly installed. The extender ring provides necessary vertical space, especially for taller items, to allow for proper heat circulation and prevent direct exposure to the heating element.

- **Food Sticking to Pan:** When using the 10-inch Enamel Baking Pan for items that may stick or release oils, consider lining the pan with parchment paper or aluminum foil. This can prevent food from adhering and simplify cleanup.
- **Insufficient Air Frying Crispness:** For optimal air frying results with the Stainless Steel Air Fry Basket, ensure not to overcrowd the basket. Overcrowding can restrict airflow, leading to less crispy food. Cook in smaller batches if necessary.
