Amazon Basics Ceramic Space Heater User Manual

Model: DQ1927-Y-SILVER

1. IMPORTANT SAFETY INSTRUCTIONS

Please read and understand all safety instructions before using this appliance. Failure to follow these instructions may result in electric shock, fire, or serious injury.

- **Placement:** Always place the heater on a firm, level surface. Do not place on soft surfaces like beds or rugs where openings may be blocked.
- **Power Source:** Ensure the heater is plugged directly into a 120V AC electrical outlet. Do not use with extension cords or power strips.
- **Clearance:** Maintain a minimum distance of 3 feet (0.9 meters) from walls, furniture, curtains, and other combustible materials.
- **Moisture:** This heater is designed for indoor use only in dry environments. **Do not use in humid environments** such as bathrooms, laundry rooms, or areas near sinks, showers, or swimming pools.
- **Supervision:** Do not leave the heater unattended while in use. Always unplug the heater when not in use.
- **Overheat Protection:** The heater is equipped with an automatic overheat protection system that will shut off the unit if it becomes too hot. If this occurs, unplug the heater, allow it to cool for 30 minutes, and then plug it back in.
- **Tip-Over Protection:** A built-in safety switch automatically turns off the heater if it is accidentally tipped over. Ensure the heater is on a stable surface for proper operation.
- **Children and Pets:** Keep the heater out of reach of children and pets. Do not allow them to play with or near the heater.
- **Ventilation:** Do not block air inlets or outlets. Ensure proper airflow around the heater.

4. OPERATING INSTRUCTIONS

Controls:

The heater features two control dials located on the top of the unit:

- **Left Dial (Thermostat):** Used to set the desired room temperature. Turn clockwise to increase the temperature, counter-clockwise to decrease.
- **Right Dial (Mode Selector):** Used to select the operating mode.
 - **Fan Only:** Circulates air without heat.
 - **Low Heat (900W):** Provides a lower heat output.
 - **High Heat (1500W):** Provides maximum heat output.

How To Use

A detailed view of the heater's two control dials: one for thermostat adjustment and the other for selecting fan, low heat, or high heat modes.

Initial Operation:

1. Plug the heater into a grounded 120V AC electrical outlet. The power indicator light will illuminate.
2. Turn the left (thermostat) dial to the maximum setting (clockwise) to ensure the heater will activate.
3. Turn the right (mode selector) dial to your desired heat setting (Low Heat or High Heat).
4. The heater will begin to emit warm air.

Adjusting Settings:

1. Once the room reaches a comfortable temperature, slowly turn the left (thermostat) dial counter-clockwise until the heater turns off. This sets the thermostat to maintain that temperature.
2. The heater will cycle on and off to maintain the set temperature.
3. To use the fan without heat, turn the right (mode selector) dial to the "Fan Only" setting.
4. To turn off the heater, turn the right (mode selector) dial to the "OFF" position and unplug the unit from the wall outlet.

Warmth On Demand

The ceramic heater with adjustable thermostat maintains warmth in small spaces, with 185-200 °F temperature control and low (750W) or high (1500W) heat settings.

5. MAINTENANCE

Regular maintenance helps ensure the longevity and safe operation of your heater.

Cleaning:

1. Always unplug the heater and allow it to cool completely before cleaning.
2. Use a soft, damp cloth to wipe the exterior surfaces of the heater. Do not use abrasive cleaners or solvents.
3. Use a vacuum cleaner with a brush attachment to gently remove dust from the air intake and exhaust grilles.
4. Do not immerse the heater in water or allow water to drip into the interior.

Storage:

1. Before storing, ensure the heater is completely cool and clean.
2. Store the heater in a cool, dry place, away from direct sunlight and extreme temperatures.

3. It is recommended to store the heater in its original packaging to protect it from dust and damage.

6. TROUBLESHOOTING

If you experience issues with your heater, refer to the following table for common problems and solutions.

Problem	Possible Cause	Solution
Heater does not turn on.	No power to the unit. Tip-over switch activated. Overheat protection activated.	Check if the heater is securely plugged into a working outlet. Ensure the heater is on a flat, stable surface. Unplug the heater, wait 30 minutes for it to cool, then plug it back in.
Heater produces cold air only.	Mode selector set to "Fan Only". Thermostat set too low.	Turn the mode selector dial to "Low Heat" or "High Heat". Increase the thermostat setting by turning the left dial clockwise.
Heater cycles on and off too frequently.	Thermostat set too close to room temperature.	Adjust the thermostat setting slightly higher or lower to find a stable operating point.
Reduced heat output.	Air inlets/outlets blocked. Dust accumulation.	Ensure nothing is obstructing the grilles. Clean the air inlets and outlets as described in the Maintenance section.
