6.1 Powering On

After connecting power, the switch will automatically begin its boot sequence. Observe the system status LEDs for boot progress.

6.2 Initial Configuration

Access the switch CLI via the console port or management Ethernet port. Use the default credentials (refer to the Quick Start Guide for specifics) to log in. Configure basic network settings such as IP address, subnet mask, and default gateway.

6.3 Connecting Devices

Connect network devices (servers, other switches, routers) to the SFP/SFP+ or QSFP28 ports using appropriate transceivers and fiber optic cables. Ensure transceivers are compatible with the switch and the connected device.

7. MAINTENANCE

7.1 Firmware Updates

Regularly check the HPE Aruba support website for the latest firmware versions. Follow the provided instructions for firmware upgrade procedures to ensure optimal performance and security.

7.2 Cleaning

Keep the switch and its ventilation openings free from dust. Use a soft, dry cloth for external cleaning. Do not use liquid cleaners directly on the device.

7.3 Environmental Monitoring

Monitor the operating temperature and humidity of the environment to ensure it remains within the specified ranges for the switch.

8. TROUBLESHOOTING

Common Issues and Solutions

Problem	Possible Cause	Solution
Switch does not power on.	No power, faulty power cord, or power supply issue.	Verify power cord connection, check power outlet, test with a different power cord.
Port LED is off.	Cable not connected, faulty cable, or incorrect transceiver.	Ensure cable is securely connected, replace cable, verify transceiver compatibility.
Cannot access CLI.	Incorrect console settings, wrong IP address, or network connectivity issue.	Check serial port settings (baud rate, data bits, parity, stop bits), verify management IP, check network cable.

For more complex issues, consult the comprehensive documentation available on the HPE Aruba support portal or contact technical support.
